Motor Visual Perception Test Third Edition Mvpt 3:

Temporal Stability of the Electronic Version of the Motor-Free Visual Perception Test Third Edition (MVPT-3) Andrea Sparks Eanes, East Carolina University. Department of Occupational Therapy, 2014 In today's technology based society children are learning information from digital devices and are currently being tested by paper assessments New electronic assessments have been created to try to compensate for this discrepancy However very few of these electronic assessments have been tested to see if they are a reliable measure The electronic version of the Motor Free Visual Perception Test 3rd edition MVPT 3 is a recently developed assessment that has not been assessed to see if it is a reliable measure The purpose of this study sought to determine if the electronic version of the MVPT 3 is reliable assessment to use with children ages 4 years 0 months to 10 years 11 months A test retest correlational design was used to assess temporal stability The main research questions reviewed if multiple administrations of the Electronic Version of the MVPT 3 yields consistent outcome scores and if the electronic version of the MVPT 3 is reliable for professionals to use clinically Fifty four participants were recruited from four daycare centers and afterschool programs in Eastern and Central North Carolina and ranged in ages 4 years 0 months to 10 years 11 months Complete data was collected on forty eight participants and was analyzed via a single tailed Pearson product moment correlation The results indicated that the electronic version of the MVPT 3 presents clinically acceptable test retest reliability with a correlation coefficient of $r = .81$ Learning effects were revealed for certain items Results indicate that this is an appropriate screening assessment for school aged children but should not be used for diagnostic purposes The results also demonstrate that further and more extensive research needs to be conducted in order to determine if the electronic version of the MVPT 3 is a reliable measure of visual perception MVPT-3 Ron Colarusso, Donald D. Hammill, 2003-01-01 Individually administered test designed to assess overall visual perceptual ability in individuals ages 4 years 0 months through 95 years old and above *Occupational Therapy Assessments for Older Adults* Kevin Bortnick, 2024-06-01 The role of measurement and the benefits of outcome measures are defined as important tools used to document change in one or more constructs over time help to describe a client's condition formulate a prognosis as well as to evaluate the effects of occupational therapy intervention *Occupational Therapy Assessments for Older Adults* 100 Instruments for Measuring Occupational Performance presents over 100 outcome measures in the form of vignettes that encompass a brief description of each instrument a review of its psychometric properties its advantages and disadvantages administration procedures permissions to use author contact information as well as where and how to procure the instrument *Occupational Therapy Assessments for Older Adults* by Dr Kevin Bortnick narrows down the list of possible choices for the occupational therapy student or clinician to only those with an amount of peer review bibliographic citations as well as acceptance within the profession The text also includes research based information with text citations and has over 100 tables diagrams and figures Included in the review of each outcome measure Description A brief record of the measure

Psychometrics A review of the level of research evidence that either supports or does not support the instrument including such items as inter rater intra rater and test retest reliabilities as well as internal consistencies and construct validities among others Advantages Synopsis of the benefits of using the measure over others including its unique attributes Disadvantages A summary of its faults For example the amount of research evidence may be limited or the measure may be expensive Administration Information regarding how to administer score and interpret results Permissions How and where to procure the instrument such as websites where it may be purchased or journal articles or publications that may contain the scale Summary A brief summation of important information Occupational Therapy Assessments for Older Adults 100 Instruments for Measuring Occupational Performance encourages occupational therapy and occupational therapy assistants to expand their thinking about the use of appropriate outcome measures with older adult populations Using the appropriate outcome measure based on evidence can aid in the promotion of health well being and participation of clients

Concurrent Validity of the Paper and Electronic Versions of the Motor-free Visual Perception Test 3rd Edition (MVPT-3) for School-aged Children Lauren Armstrong, East Carolina University. Department of Occupational Therapy, 2014 This study examined the concurrent validity of the electronic version of the Motor Free Visual Perception Test Third Edition MVPT 3 The purpose of the study was to determine whether the electronic MVPT 3 was valid for use with school aged children A counter balanced correlational design was used and the subjects were 33 school aged children 4 10 years old recruited from 4 daycare centers and after school programs within eastern North Carolina The data were analyzed using SPSS to calculate a single tailed Pearson product moment correlation coefficient to compare the score from the first administration of the test to the second score A high correlation was expected between the electronic version and the paper version of the MCPT 3 The electronic version of the MVPT 3 was found to possess clinically acceptable concurrent validity with a correlation coefficient of $r = .69$ and thus could be an appropriate screening tool to be used by professionals working with children in a variety of settings During data analysis learning effects were revealed for certain items on the MVPT 3 which along with its low reliability in the current paper version supports that the MVPT 3 should not be used for diagnostic purposes or to demonstrate change over time and it is recommended that it be used as a screening tool only
