Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used. It has a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a coding that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display module on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal combustion engine
- The truck brakes with automatic brake release and off the engine brake
- The main battery (in the emergency function) the internal combustion engine switches off
- An error code appears on display

These functions can be activated by switching off the combustion engine with the key switch. Every 4 seconds, the control unit shows whether the error is still present. If the error is no longer present, the truck returns to normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

Changing the controller

⚠ Warning

Prohibit independent component change due to electrostatic discharge. Independent change in working elements will cause if the controller is damaged.

The controller is equipped with a "flop" plug, which is attached to the back to avoid using batteries. Communication takes place via RS485 bus. The upper part module and the software version of the controller can be read out via the bus interface.

If the controller is replaced, the permitted work unit controller must be identified and plug adapted to the code factory. All necessary information is available on the code factory.
