Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Integrates in control with an electrical train and features the latest control technology, based on a hydraulic controller, a compact electronic controller equipped with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive concepts. To save fitting time, pre-wired air lines, each with color-coded hose marking that already identifies the truck.

Troubleshooting

The processor of the electronic control unit analyses analogue and digital signals. The processor interprets digital messages and queries errors, and displays an error message on the working instrument on the dash dashboard. In addition, the control unit accumulates a variety of messages according to the user's layout selection.

- Working light flashes
- Resonance indicator of the internal combustion engine
- The fuel intake air temperature indicator and oil temperature
- The main battery or the emergency battery, the internal combustion engine switches off
- An error code appears on display

These functions can be activated by switching off the combustion engine and the fuel supply. During a search, the control unit shows whether the error is still present. If the error no longer persists, the truck returns normal operation. If the error persists, the error code response on the display will one of the messages below describe the error.

Changing the controller

⚠ Attention
 Possible hazardous component damage due to electrolytic discharge. Irreparable damage to working elements will occur if the controller is stored.

The controller is equipped with a "float plug" which is attached to the back to avoid electrolysis. Connections must never be left open. The upper part number and the software version of the controller can be read out via the test equipment.

⚠ Warning

If the controller is replaced, the permitted spare part controller must be identified and duly adapted to the cable harness. All necessary information is available on the cable harness.
