

## Pump unit EP9

### Hydraulic pump

#### General

The Bosch hydraulic pump is an external gear pump.

The pump essentially consists of the pair of gears rotating in 4 bearing bushing and of the housing with the front and rear cover. The drive shaft, sealed with a sealing ring, is fixed in through the front cover.

The bearings forces are taken up by plain bearings. These are designed for high bearing pressures and they have a good resistance to eccentricity, particularly at low speeds.

The internal sealing of the pressure chamber is pressure-dependent, so that an optimum efficiency is achieved.

Operating pressure is applied to the movable bearing bushings at the front side, pushing and sealing them against the gears.

The fields of pressure are limited by special seals.

The sealing at the circumference of the gears is provided by the minimal gap resulting when the gears are pressed against the housing, depending on the oil pressure.
