Elements of Nonlinear Time Series Analysis and Forecasting Jan G. De Gooijer, 2017-03-30 This book provides an overview of the current state of the art of nonlinear time series analysis richly illustrated with examples pseudocode algorithms and real world applications Avoiding a theorem proof format it shows concrete applications on a variety of empirical time series The book can be used in graduate courses in nonlinear time series and at the same time also includes interesting material for more advanced readers Though it is largely self contained readers require an understanding of basic linear time series concepts Markov chains and Monte Carlo simulation methods The book covers time domain and frequency domain methods for the analysis of both univariate and multivariate vector time series It makes a clear distinction between parametric models on the one hand and semi and nonparametric models methods on the other This offers the reader the option of concentrating exclusively on one of these nonlinear time series analysis methods To make the book as user friendly as possible major supporting concepts and specialized tables are appended at the end of every chapter In addition each chapter concludes with a set of key terms and concepts as well as a summary of the main findings Lastly the book offers numerous theoretical and empirical exercises with answers provided by the author in an extensive solutions manual
