Lappo,2014 With the worlds population expected to reach 8 2 billion people by 2030 and with 842 million people estimated  
as having been undernourished in the period 201113 food supply will present a growing challenge in the next two decades  
With increases in income along with demographic changes related to family size population ageing and urbanization and  
consumer trends such as concerns for healthy eating and sustainable production there will be great shifts in demand and  
major changes in the composition of demand This will in turn have an impact on food supply which will need to both increase  
and become more efficient if it is to grow within the constraints presented by the availability of natural resources and  
existing technology This publication presents projections of future food supply up to 2030 building on existing analyses but  
also providing more economic perspectives on the future evolution of food production *Michigan Postsecondary*
