Government Reports Announcements & Index ,1995 **Laboratory Balances - Calibration Requirements** ,2020

A User's Guide to the Calibration of Laboratory Balances Testing Laboratory Registration Council of New Zealand,1985

A User's Guide to the Calibration Requirements of Laboratory Balances Malcolm R. Bell, Testing Laboratory Registration Council of New Zealand,1977 **The Calibration of Balances** David B. Prowse,1985 *Technical Documentation for the*

Mass Calibration Laboratory Balance Automation (Classic Reprint) Vincent J. Lee,2017-10-29 Excerpt from Technical Documentation for the Mass Calibration Laboratory Balance Automation The balance automation software was written to improve and ease the process of mass calibrations Previously mass calibration staff would measure a set of weights and record manually on paper the balance readings for each weighing step in the weighing process This introduces dust into the measuring environment and inaccuracies in data collection The weighing steps are dictated by the measurement design chosen by the staff according to the weight set Proper sequencing of the measurements must also be done by hand most likely for long and tedious designs Environmental values of air temperature atmospheric pressure and relative humidity are recorded twice once before the weight measurements and once after also manually Note as well that although the balances are electronic and capable of serial communications with computer equipment they were used manually The automation software s function allows one to four operators each at any of the four stations to perform measurements simultaneously The software coordinates the balance and environmental readings by connecting the computer to the instruments via the coms boxes for each mass measurement It communicates with the thermometer barometer hygrometer and balance through links between the ports of the coms boxes to get their readings records the data values in files on the data disk and instructs the operator on when to place weights on the balance pan After the measurement of the weights is completed the software filters the data for operator rejected measurements combines the data from previous series if they exist and creates an input file that is formatted for the Mass Code software program The Mass Code runs and was developed separately from this automation software Note that the input file is created only after a single series design measurement or after the last series of a design is complete Also the data file may be read into a Spreadsheet program for custom analysis About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
