book is written by authors that are not food scientists e g chemists they are not academics that are engaged with teaching or they are not sufficiently qualified to teach In this case it is difficult to find links between the chemistry of foods and its relevance to applications or quite frequently future employment prospects of the student Introduction to Food Chemistry bridges this gap in the relevant literature as it employs the latest pedagogical theories in textbook writing to present the subject to students with broad range of cognitive skills This book presents specific learning objectives for each chapter and is self contained so students will not need to search for essential information outside the textbook To support learning the book has Didactic elements with information being conveyed with 3D figures color coded schemes and graphs annotations on figures that link it to the text descriptions Built in pedagogy and learning activities at the end of each chapter that are linked to the learning objectives Keywords and concepts for online search to instigate curiosity for further studies Conversational writing style without losing academic rigor To support lecturers the book has Helps focus teaching preparation on key aspects of food chemistry relevant to both industry and modern research Aids the preparation of exams assignments and other types of assessment or learning activities For lecturers in search of a singular source to aid in their introductory food chemistry courses look no further than Introduction to Food Chemistry Vignette Based Multiple Choice Questions In Medical Biochemistry Dr. Ranjit Patil, Dr. Kavindra Borgaonkar, Among the wide variety of written methods of assessment multiple choice questions MCQs especially the single best option variety remain the staple of examinations administered to medical students MCQs are used extensively by medical schools and also in the initial steps of examinations by licensing bodies Their logistical advantage of allowing testing of large number of students and broad sampling of topics in a relatively short time remains unchallenged by any other formats of written examinations The format and wording of the stem of a MCQ play an essential role in determining what is being assessed In its simplest form a MCQ can ask about an isolated fact Such a context free MCQ tests rote knowledge only Higher order skills such as interpretation and problem solving are best tested using a context rich stem in which the question is embedded in a meaningful context In medical subjects context enrichment most often takes the form of a clinical vignette The advantages of enriching the stem with a clinical vignette are two fold First it allows for the assessment of higher order cognitive skills Second information is thought to be better recalled when the learning context is similar to retrieval context In this book MCQs are based on clinical vignettes The clinical context will increase commitment of the student to acquire and retain basic knowledge of medical biochemistry **Urinary System**
