Landslide Analysis and Early Warning Systems Benni Thiebes, 2012-01-20 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas *2008 National Highway Asset Managemetn Data Collection Workshop [participant Program].* ,2008 Water Management and the Environment: Case Studies Martina Zelenakova, 2018-04-24 This book brings together contributions from experts in water management scientists researchers academics and lecturers sharing experiences and successes in this field It is devoted to a wide range of water resources management issues including water quality to water quantity considering all impacts of water issues in the environment The book presents international approaches to the latest developments in both the fundamental bases and the applicability of state of the art knowledge that can be effectively used for solving a variety of large problems in integrated water resources management The main focus of the book is on water pollution physical chemical biological and geographical pollution hydrology problems and limnology tasks *Leica GPS1200* ,2008 **The Leica Manual** Willard Detering Morgan, Henry M.
