## **Math Lit Paper 2014 Caps March:**

Assessing Academic Literacy in a Multilingual Society Albert Weideman, John Read, Theo du Plessis, 2020-11-02 South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and to a much lesser extent Afrikaans but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.

**Empowering Novice Academics for Student Success** Dr Johann Hugo, 2021-04-26 This book is essential for academics that enter the field of higher education and training as it focuses on preparing teachers and trainers to respond appropriately to student success challenges. Student success is a burning issue both globally and locally. While student achievement is determined by a combination of factors, teachers and their teaching practices do matter. Higher education teachers are expected to fulfil different roles at different times such as planning for curriculum implementation, mentorship and coaching, facilitating learning resource development and student assessment. Against this background, the primary purpose of *Empowering novice academics for student success* is building the capacity of novice teachers and trainers to play an influential role in increasing student success throughout.

**Farm-Level Modelling** Shailesh Shrestha, Andrew Barnes, Bouda Vosough Ahmadi, 2016-09-28 Agriculture is the product of a complex mixture of behavioural, biophysical and market drivers. Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years. The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems. The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions. Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers. This book provides an in depth description of different methodologies and techniques currently used in farm level modelling. While giving an overview of the theoretical grounding behind the models, an applied approach is also used. Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply. This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models. Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic, social and environmental goals required to achieve the aims of multidimensional policy.

Applied Methods for Agriculture and Natural

Resource Management Siwa Msangi, Duncan MacEwan, 2019-05-17 This book assesses recent developments in the analysis of agricultural policy and water resource management and highlights the utility and theoretical rigor of quantitative methods for modeling agricultural production market dynamics and natural resource management In diverse case studies of the intersection between agriculture environmental quality and natural resource sustainability the authors analyze economic behavior both at aggregate as well as at individual agent level in order to highlight the practical implications for decision makers dealing with environmental and agricultural policy The volume also addresses the challenges of doing robust analysis with limited data and discusses the appropriate empirical approaches that can be employed The studies in this book were inspired by the work of Richard E Howitt Emeritus Professor of Agricultural Economics at the University of California at Davis USA whose career has focused on the application of robust empirical methods to address concrete policy problems

**Lecture Notes in Real-Time Intelligent Systems** Jolanta Mizera-Pietraszko, Pit Pichappan, Lahby

Mohamed, 2018-05-14 The second volume of the book series highlights works presented at the 2nd International Conference on Real Time Intelligent Systems held in Casablanca on October 18 20 2017 The book offers a comprehensive practical review of the state of the art in designing and implementing real time intelligent computing for the areas within the conference s scope such as robotics intelligent alert systems IoT remote access control multi agent systems networking mobile smart systems crowdsourcing broadband systems cloud computing streaming data and many other applications Research in real time computing supports decision making in dynamic environments Some examples include ABS FBW flight control automatic air conditioning etc Intelligent computing relies heavily on artificial intelligence AI to make computers act for humans The authors are confident that the solutions discussed in this book will provide a unique source of information and inspiration for researchers working in AI distributed coding algorithms or smart services and platforms and for IT professionals who can integrate the proposed methods into their practice

**Natural Resources and the Environment**

Mark Kanazawa, 2021-05-18 Natural Resources and the Environment Economics Law Politics and Institutions provides a new approach to the study of environmental and natural resource economics It augments current contributions from the fields of public choice law and economics and the burgeoning field of what used to be called the New Institutional Economics to describe explain and interpret how these new developments have been applied to better understand the economics of natural resources and the environment This textbook takes a multi disciplinary approach which is essential for understanding complex environmental problems and examines the issue from not only an economic perspective but also taking into account law politics and institutions In doing so it provides students with a realistic understanding of how environmental policy is created and presents a comprehensive examination of real world environmental policy The book provides a comprehensive coverage of key issues including renewable energy climate change agriculture water resources land conservation and fisheries with each chapter accompanied by learning resources such as recommended further reading discussion questions

and exercises This textbook is essential reading for students and scholars seeking to build an interdisciplinary understanding of natural resources and the environment      **Standard & Poor's Stock Reports** ,1998-07      **Annual Report** Mpumalanga (South Africa).
