Mathematical Literacy Paper Oct Nov Examination Memo:

An Age of Accountability John L. Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree

Biomedical Computing Joseph A. November, 2012-06-01 Winner of the Computer History Museum Prize of the Special Interest Group Computers Information and Society Imagine biology and medicine today without computers What would laboratory work be like if electronic databases and statistical software did not exist Would disciplines like genomics even be feasible if we lacked the means to manage and manipulate huge volumes of digital data How would patients fare in a world absent CT scans programmable pacemakers and computerized medical records Today computers are a critical component of almost all research in biology and medicine Yet just fifty years ago the study of life was by far the least digitized field of science its living subject matter thought too complex and dynamic to be meaningfully analyzed by logic driven computers In this long overdue study historian Joseph November explores the early attempts in the 1950s and 1960s to computerize biomedical research in the United States Computers and biomedical research are now so intimately connected that it is difficult to imagine when such critical work was offline Biomedical Computing transports readers back to such a time and investigates how computers first appeared in the research lab and doctor s office November examines the conditions that made possible the computerization of biology including strong technological institutional and political support from the National Institutes of Health and shows not only how digital technology transformed the life sciences but also how the intersection of the two led to important developments in computer architecture and software design The history of this phenomenon has been only vaguely understood November s thoroughly researched and lively study makes clear for readers the motives behind computerizing the study of life and how that technology profoundly affects biomedical research today
