Digging Deeper M. Gail Hickey, Jeremiah Clabough, 2017-06-01 Experts in social studies education and gifted education share teacher-tested strategies for differentiating social studies in K-12 classrooms. Chapter authors showcase best practice and research-based lessons and activities that enrich and expand social studies instruction while building K-12 students' critical and creative thinking. Each chapter contains two or more teacher-tested lessons or activities linking social studies content and concepts to the standards and recommendations of the National Association for Gifted Children (NAGC) and National Council for the Social Studies (NCSS). This edited volume is targeted toward K-12 teachers and administrators, gifted education coordinators and consultants, parents of gifted children, social studies methods instructors, and central office administrators. Each chapter contains activities that can be adapted and replicated in teachers' classrooms. Chapters focus on significant social studies topics such as civic education, historical thinking, drama, and teaching with primary sources. Each topic is approached in ways that meet the needs of gifted education students. Through its emphasis on critical thinking, inquiry-based instruction, and higher-order thinking skills, activities and lessons in the book challenge K-12 educators to raise the bar for classroom instruction in ways that improve opportunities of learning for all students.

International Handbook of Research on Multicultural Science Education Mary M. Atwater, 2022-06-30 This handbook gathers in one volume the major research and scholarship related to multicultural science education that has developed since the field was named and established by Atwater in 1993. Culture is defined in this handbook as an integrated pattern of shared values, beliefs, languages, worldviews, behaviors, artifacts, knowledge, and social and political relationships of a group of people in a particular place or time that the people use to understand or make meaning of their world, each other, and other groups of people, and to transmit these to succeeding generations. The research studies include both different kinds of qualitative and quantitative studies. The chapters in this volume reflect differing ideas about culture and its impact on science learning and teaching in different K-14 contexts and policy issues. Research findings about groups that are underrepresented in STEM in the United States and in other countries, related to language issues and indigenous knowledge, are included in this volume.

Coal Geology of China Shifeng Dai, Robert B. Finkelman, 2020-04-28 Coal and China, to some extent, have become synonymous. China is by far the largest user of coal in the world. In 2016, coal production in China amounted to 3.21 billion tons, about half of the total global coal production. Coal consumption accounts for more than 65% of primary energy consumption in China. The Chinese coal industry greatly contributes to the economic development in China, the second

largest economy in the world However periodically ubiquitous images of smog blanketing major Chinese cities are viewed all over the world Coal combustion is one of the important contributors to smog which is considered to be a major environmental and human health problem for China and other countries News stories also highlight the periodic coal mine disasters that kill hundreds of Chinese coal miners annually The need to address these and other human health environmental and mine safety issues and to maximize resource recovery and use justifies a vigorous coal research effort This book brings together experts on almost every aspect of coal geology coal production composition and use of the coal and its by products and coal s environmental and human health impacts The chapters in this book were originally published in a special issue of the International Geology Review
