Experimental Philosophy and the Origins of Empiricism Peter R. Anstey, Alberto Vanzo, 2023-02-23 The emergence of experimental philosophy was one of the most significant developments in the early modern period. However, it is often overlooked in modern scholarship despite being associated with leading figures such as Francis Bacon, Robert Boyle, Isaac Newton, Jean Le Rond d'Alembert, David Hume, and Christian Wolff. Ranging from the early Royal Society of London in the seventeenth century to the uptake of experimental philosophy in Paris and Berlin in the eighteenth, this book provides new terms of reference for understanding early modern philosophy and science and its eventual eclipse in the shadow of post-Kantian notions of empiricism and rationalism. *Experimental Philosophy and the Origins of Empiricism* is an integrated history of early modern experimental philosophy which challenges the rationalism and empiricism historiography that has dominated Anglophone history of philosophy for more than a century.

Times of History, Times of Nature Anders Ekström, Staffan Bergwik, 2022-02-11 As climate change becomes an increasingly important part of public discourse, the relationship between time in nature and history is changing. Nature can no longer be considered a slow and immobile background to human history, and the future can no longer be viewed as open and detached from the past. *Times of History, Times of Nature* engages with this historical shift in temporal sensibilities through a combination of detailed case studies and synthesizing efforts. Focusing on the history of knowledge, media theory, and environmental humanities, this volume explores the rich and nuanced notions of time and temporality that have emerged in response to climate change.

A Companion to Global Environmental History J. R. McNeill, Erin Stewart Mauldin, 2025-02-06 *A COMPANION TO GLOBAL ENVIRONMENTAL HISTORY* Equips both specialists and newcomers with the historical intellectual and political context for engagement with the environment. Providing multiple points of entry into a dynamic, fast-growing field, *A Companion to Global Environmental History* explores the many contours of the relationship between human societies and the natural world on which they depend. Bringing together essays by an international roster of both established experts and emerging scholars, this volume covers a uniquely broad range of temporal, geographic, thematic, and contextual approaches to the practice of global environmental history. Thirty-three detailed chapters describe how the relationship between society and nature has changed over time, examine the various drivers of change, and environmental transformations, survey different types of environmental thought and action around the world, and more. Now in its second edition, the *Companion* is fully revised to reflect major research developments and new trajectories within the field. Updated chapters that present new evidence for longstanding debates and innovative applications of environmental history are accompanied by six entirely new chapters on India, China, Africa, early modern cities, global environmental governance, and European environmentalism. Offering fresh insights into environmental thought, culture, policy, and politics, *A Companion to Global Environmental History, Second Edition* is an ideal textbook for undergraduate and graduate students and an invaluable reference for scholars, researchers, and environmental

History of Tempeh and Tempeh Products (1815-2022) William Shurtleff; Akiko Aoyagi,2022-02-06 The world s most comprehensive well documented and well illustrated book on this subject With extensive subject and geographic index 325 photographs and illustrations mostly color Free of charge in digital PDF format Noah's Ravens James O. Farlow,2018-10-08 How can the tracks of dinosaurs best be interpreted and used to reconstruct them In many Mesozoic sedimentary rock formations fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons Such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging How different in size and shape can footprints be and yet have been made by the same kind of dinosaur How similar can they be and yet have been made by different kinds of dinosaurs To what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers Profusely illustrated and meticulously researched

Noah's Ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives. The results help decipher one of the world's most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern North America. Those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds, one of which was jokingly identified as Noah's legendary raven. **Finding List of the Enoch Pratt Free Library of Baltimore City, Central Library** Enoch Pratt Free Library, 1890 **The Publishers' Circular and Booksellers' Record**, 1919 The Publisher, 1916
