Trends in College Pricing, 2016. Trends in Higher Education Series Jennifer Ma, Sandy Baum, Matea Pender, Meredith Welch, 2016

In 2016-17 published tuition and fee prices rose slightly less than the year before. The rapid price growth observed during the Great Recession has abated as typically happens when the economy recovers but the rate of increase in tuition and fees continues to exceed inflation. More notable however is the pattern of the net prices students actually pay. Large increases in grant aid and education tax credits cushioned the growth in published prices for a few years and average net tuition and fee prices declined in the public and private nonprofit sectors in 2008-09 and 2009-10. But net prices have risen since then as financial aid fails to keep pace with rising published prices. This increase is outpacing growth in incomes fueling concerns about college affordability. This document reports on the prices charged by colleges and universities in 2016-17 how prices have changed over time and how they vary within and across types of institutions states and regions. It also includes estimates of the net prices students and families pay after taking financial aid into consideration. Data on institutional revenues and expenditures and on changing enrollment patterns over time supplement the data on prices to provide a clearer picture of the circumstances of students and the institutions in which they study. For the companion report Trends in Student Aid 2016 Trends in Higher Education Series see ED572538. For the report from the previous year Trends in College Pricing 2015 Trends in Higher Education Series see ED572540.
