Daniel,2014-08-27 Naturally fractured reservoirs constitute a substantial percentage of remaining hydrocarbon resources
they create exploration targets in otherwise impermeable rocks including under explored crystalline basement and they can
be used as geological stores for anthropogenic carbon dioxide Their complex behaviour during production has traditionally
proved difficult to predict causing a large degree of uncertainty in reservoir development The applied study of naturally
fractured reservoirs seeks to constrain this uncertainty by developing new understanding and is necessarily a broad
integrated interdisciplinary topic This book addresses some of the challenges and advances in knowledge approaches
concepts and methods used to characterize the interplay of rock matrix and fracture networks relevant to fluid flow and
hydrocarbon recovery Topics include describing characterizing and identifying controls on fracture networks from outcrops
