Counting Bounty Jeffery Johnson Smith, 2020-10-02 How much do we spend on the nature we use Answer that and you ll know the size of your commonwealth and the coming phase of the economy Most economists bundle land with capital or leave out land and its rent altogether and cripple their discipline Geonomists OTOH forecast the last recession to the exact quarter Counting Bounty highlights a widespread blindspot Most of us overlook land and its power to twist an economy Householders typically spend most of their budget on land beneath their homes and within every purchase like food without awareness Tallying rent this work fills in those blindspots with insights society needs to know It s not possible to do economics without getting politics all over you The story begins with the official and academic efforts to minimize the total worth of Earth in America A perusal of the historical relationship between the elite and the intellectual shows that paying the piper calling the tune is the norm even up to the present Using a slew of statistics and others research findings I track rent to its recipients to the rentiers who own much and wield much power The cited sources give the story more legs to stand on than a centipede Aware reformers can address pressing problems by tapping land value Towns in Pennsylvania infill instead of sprawl efficient land use conserves energy Pittsburgh spurs urban renewal sans subsidy cities are cash starved Once towns in Australia experienced factory openings during a recession Aspen Colorado and Hong Kong

Robustness of the Estimates of the Hybrid New Keynesian Phillips Curve Jordi Galí,Mark Gertler,J. David López-Salido,2005 Gal and Gertler 1999 developed a hybrid variant of the New Keynesian Phillips curve that relates inflation to real marginal cost expected future inflation and lagged inflation GMM estimates of the model suggest that forward looking behavior is dominant The coefficient on expected future inflation substantially exceeds the coefficient on lagged inflation While the latter differs significantly from zero it is quantitatively modest Several authors have suggested that our results are the product of specification bias or suspect estimation methods Here we show that these claims are incorrect and that our results are robust to a variety of estimation procedures including GMM estimation of the closed form and nonlinear instrumental variables Also as we discuss many others have obtained very similar results to ours using a systems approach including FIML techniques Hence the conclusions of GG and others regarding the importance of forward looking behavior remain robust *Who's who in Finance and Business* ,2008 **Principles of Economics** N.
