

GENERAL INFORMATION 1-19

Technical Information-KIPASS (Kawasaki's Intelligent Proximity Activation Start System)

Key Knob Operation

- The key knob consists of ON, OFF, FSS, and LOCK positions.
*FSS indicates the following positions in which the key knob can be released during operation: F = fuel tank, S = seat, and S = saddlebag.

Starting the Engine

- The key knob can be turned to the ON position when the key knob symbol appears on the LCD meter. Then, the letters "Kawasaki" will appear for 3 seconds on the LCD screen.
 - When the engine operates normally, the turn signal lights in the meter will flash (answer-back) twice to inform the rider of normal operation.
- (FOB key, steering lock, and DFI ECU authentication)

Running

- The system tries to detect the FOB each time the vehicle goes above 20 km/h.
*The system will not detect the FOB key if it cannot detect the vehicle speed, such as in case of a meter malfunction.
- If the system cannot detect the FOB key, an error message will appear on the meter. The message will disappear if the system can detect the FOB key.
*If the system is unable to authenticate, it will maintain authentication communication until the ignition is turned OFF.
- The operation range of the FOB key could change because it uses weak radiowave signals. Thus, an error message could appear even if the FOB key is within the use range.
*This will not stop the engine after it is started.
