Lang, 2013-11-29 Web technologies are increasingly relevant to scientists working with data for both accessing data and
creating rich dynamic and interactive displays The XML and JSON data formats are widely used in Web services regular Web
pages and JavaScript code and visualization formats such as SVG and KML for Google Earth and Google Maps In addition
scientists use HTTP and other network protocols to scrape data from Web pages access REST and SOAP Web Services and
interact with NoSQL databases and text search applications This book provides a practical hands on introduction to these
technologies including high level functions the authors have developed for data scientists It describes strategies and
approaches for extracting data from HTML XML and JSON formats and how to programmatically access data from the Web
Along with these general skills the authors illustrate several applications that are relevant to data scientists such as reading
and writing spreadsheet documents both locally and via Google Docs creating interactive and dynamic visualizations
displaying spatial temporal displays with Google Earth and generating code from descriptions of data structures to read and
write data These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies
The book contains many examples and case studies that readers can use directly and adapt to their own work The authors
have focused on the integration of these technologies with the R statistical computing environment However the ideas and
skills presented here are more general and statisticians who use other computing environments will also find them relevant
