Planning, Design and Optimization of Distribution System for Affected Area of Upper Karnali Hydropower Project Ashish Shrestha, 2017-10-30 Master's Thesis from the year 2017 in the subject Engineering Mechanical Engineering grade 4 Kathmandu University School of Engineering course Masters Program in Planning and Operation of Energy System language English abstract This study illustrates the best approach for energy access to the affected area of a 900 MW Upper Karnali Hydropower Project UKHPP located in Western Nepal As per concession agreement executed between the developer of UKHPP and the Government of Nepal the developer will develop 2 MW power plant at the toe of the dam using the environmental release discharge to electrify the affected area of UKHPP First the study looks at the optimization of the electric grid network in the project affected area using Kruskal's algorithm The optimization is carried out so that access to electricity is guaranteed to possible load centers in the affected area to the extent possible in technical and financial feasible manner This study is an attempt to connect the possible load centers through an optimum network design based on demography topography technical feasibility and socio economic factors The study focuses on the design of the electrical network based on a least distance path between the identified nodes The designed network is based on the survey using GIS Topographical maps and satellite views from Google map A total of 57 load centers are identified connected through a grid 144.59 km in length Similarly taking n = 4 sample the total length of 220V distribution system is estimated to be 417.24 km After that the study focuses on the Static Load Flow Analysis SLFA by developing a framework based on Conventional Newton Raphson method to analyze the network's parameters The result obtained from the analysis is compared with the results of standard 33 bus radial feeder system and forward backwards f b sweep based algorithm using statistical analysis The standard error is accepted for the 95% level of significance It is concluded that the load flow analysis LFA of the primary distribution in this study conducted using the N R method was adequate and best fit for a grid like network with medium voltage level The estimated losses are low and under the limit i.e. 2.04% which shows that the designed system performs adequately From the analysis it is found that the pre defined generation of 2 MW power is insufficient to electrify the whole affected area of the UKHPP Different alternative ways are recommended to manage the load and provide electricity to the people of the affected area
