

G - Turn the sensitivity control lever (15) anti-clockwise until the lift arms stop trembling or until oil stops trickling from the discharge port (G). At this point, stop turning the lever, stop the engine and lower the lift arms. Refit the control lever (A) and its limit stop pin and then turn it anti-clockwise by a further 25-30 mm, measured at the end of the lever.

H - The control valve is now set at the point of maximum sensitivity. This point is located with the lever limit stop pin resting against the lower right end Allen screw (3); to achieve this, slacken the four Allen screws which secure the cover (C) and rotate the lever (A) and locking ring (D) together in order to move the point of maximum sensitivity to the position in which the stop pin contacts the appropriate Allen screw (3). Retighten the four Allen screws which secure the cover.
