It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Banks, Exchanges, and Regulators Ranald C. Michie, 2020-11-26 Never have financial markets been subjected to a period of change as rapid and extensive as took place from the 1970s onwards In the 1970s global financial markets were controlled by governments compartmentalized along national boundaries and segregated according to the particular activities they engaged in This all disintegrated in the decades that followed under the pressure of market forces global integration and a revolution in the technology of trading One product of this transformation was the Global Financial Crisis of 2008 which exposed the fragility of the new structures created and cast a long shadow that we still live in today The response to that crisis has shaped the global financial system which has been tested once again by the coronavirus pandemic However none of the outcomes of this transformation were inevitable despite the forces at work They were the product of decisions taken at the time for a multitude of reasons Banks exchanges and regulators were faced with unprecedented challenges and opportunities as a revolution swept away traditional ways of conducting banking the methods used to trade in financial markets and the rules and regulations employed to enforce discipline In this book Ranald C Michie provides an authoritative and unrivalled account of this upheaval based on a careful and exhaustive reading of the Financial Times over the last four decades using it to provide a source of material unmatched by any other in terms of depth and coverage By studying what happened and why in real time it is possible to explain the decisions taken that shaped the course of the transformation and its repercussions

Climate Change Law in China in Global Context Xiangbai He, Hao Zhang, Alexander Zahar, 2020-05-31 In *Climate Change Law in China in Global Context* seven climate change law scholars explain how the country's legal system is gradually being mobilized to support the reduction of greenhouse gas emissions in China and achieve adaptation to climate change There has been little English scholarship on the legal regime for climate change in China This volume addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation The authors are not only interested in China's laws on paper rather the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws laws in preparation the changing standing of law relative to policy and the further reforms that will be necessary in response

to the 2015 Paris Agreement on Climate Change This comprehensive and critical account of the Chinese legal system s response to the pressures of climate change will be an important resource for scholars of international law environmental law and Chinese law **Validating Technological Innovation** David Coniam,Peter Falvey,2016-04-02 This book discusses Hong Kong s use of onscreen marking OSM in public examinations Given that Hong Kong leads the way in OSM innovation this book has arisen from a recognised need to provide a comprehensive coherent account of the findings of various separate but linked validation studies of onscreen public examinations in Hong Kong The authors discuss their experience of the validation process demonstrating how high stakes innovation should be fully validated by a series of research studies in order to satisfy key stakeholders **The Palgrave Handbook of Cross-Border Journalism** Liane Rothenberger,Martin Löffelholz,David H. Weaver,2024-01-02 This handbook critically analyzes cross border news production and transnational journalism cultures in the evolving field of cross border journalism As the era of the internet has further expanded the border transcending production dissemination and reception of news and with transnational co operations like the European Broadcasting Union and BBC World News demonstrating different kinds of cross border journalism the handbook considers the field with a range of international contributions It explores cross border journalism from conceptual and empirical angles and includes perspectives on the systemic contexts of cross border journalism its structures and routines changes in production processes and the shifting roles of actors in digital environments It examines cross border journalism across regions and concludes with discussions on the future of cross border journalism including the influence of automation algorithmisation virtual reality and AI **Genomics in Aquaculture to Better Understand Species Biology and Accelerate Genetic Progress** José Manuel Yáñez,Ross Houston,Scott Newman,2016-09-15 From a global perspective aquaculture is an activity related to food production with large potential for growth Considering a continuously growing population the efficiency and sustainability of this activity will be crucial to meet the needs of protein for human consumption in the near future However for continuous enhancement of the culture of both fish and shellfish there are still challenges to overcome mostly related to the biology of the cultured species and their interaction with increasingly changing environmental factors Examples of these challenges include early sexual maturation feed meal replacement immune response to infectious diseases and parasites and temperature and salinity tolerance Moreover it is estimated that less than 10% of the total aquaculture production in the world is based on populations genetically improved by means of artificial selection Thus there is considerable room for implementing breeding schemes aimed at improving productive traits having significant economic impact By far the most economically relevant trait is growth rate which can be efficiently improved by conventional genetic selection i e based on breeding values of selection candidates However there are other important traits that cannot be measured directly on selection candidates such as resistance against infectious and parasitic agents and carcass quality traits e g fillet yield and meat color However these traits can be more efficiently improved using molecular

tools to assist breeding programs by means of marker assisted selection using a few markers explaining a high proportion of the trait variation or genomic selection using thousands of markers to estimate genomic breeding values The development and implementation of new technologies applied to molecular biology and genomics such as next generation sequencing methods and high throughput genotyping platforms are allowing the rapid increase of availability of genomic resources in aquaculture species These resources will provide powerful tools to the research community and will aid in the determination of the genetic factors involved in several biological aspects of aquaculture species In this regard it is important to establish discussion in terms of which strategies will be more efficient to solve the primary challenges that are affecting aquaculture systems around the world The main objective of this Research Topic is to provide a forum to communicate recent research and implementation strategies in the use of genomics in aquaculture species with emphasis on 1 a better understanding of fish and shellfish biological processes having considerable impact on aquaculture systems and 2 the efficient incorporation of molecular information into breeding programs to accelerate genetic progress of economically relevant traits Powering Forward Bill Ritter, Jr.,2016-03-15 A historic energy revolution is underway in the United States Wind sunlight and other sustainable resources are now the fastest growing sources of energy in the U S and worldwide American families are installing power plants on their roofs and entire communities are switching to 100 percent renewable energy The urgent need to prevent climate change is causing people around the planet to question their reliance on carbon intensive oil coal and natural gas Author Bill Ritter Jr the 41st governor of Colorado and one of America s key thought leaders on this topic discusses the forces behind the energy revolution the new ways we must think about energy and the future of fossil and renewable fuels It is an essential read for any who want to understand one of history s biggest challenges to peace prosperity and security in the United States Written in partnership with the Center for a New Energy Economy Parliamentary Debates (Hansard).
