### Linde Hydraulic Control (LHC)

#### Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology, known as a hydraulic actuator, in a digital electro-hydraulic controller instead with a very powerful microcontroller system. It controls functions for the drive unit and the working hydraulics (2).

#### Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a control that already identifies the truck.

#### Troubleshooting

The processor of the electronic control unit analyses analogue and digital signals. The processor interprets digital messages and system errors, and displays an error message on the display/monitor on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Non-secure detection of the internal communication signal
- The truck brakes with automatic brake release and off the target state
- The main battery (in the emergency function) has internal communication signal failure
- An error code appears on display

These functions can be activated by switching off the communication signal with the key switch. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck returns normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

#### Changing the controller

##### 4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to sensitive components will occur if the controller is moved.

The controller is equipped with a "float plug" which is attached to the back to avoid static damage. Communication lines must not be left hanging. The upper part of the controller and the software version of the controller can be read out via the back interface.

If the controller is replaced, the personal user profile controller must be deleted and a new profile created for the user. All necessary information is available on the code keypad.
