Modern Chemistry Measurements And Calculations Review:

Reviews of Modern Quantum Chemistry Kali Das Sen, 2002 This important book collects together state-of-the-art reviews of diverse topics covering almost all the major areas of modern quantum chemistry. The current focus in the discipline of chemistry is synthesis, structure, reactivity and dynamics. It is mainly on control. A variety of essential computational tools at the disposal of chemists have emerged from recent studies in quantum chemistry. The acceptance and application of these tools in the interfacial disciplines of the life and physical sciences continue to grow. The new era of modern quantum chemistry throws up promising potentialities for further research.

Reviews of Modern Quantum Chemistry is a joint endeavor in which renowned scientists from leading universities and research laboratories spanning 22 countries present 59 in-depth reviews. Along with a personal introduction written by Professor Walter Kohn, Nobel laureate in Chemistry 1998, the articles celebrate the scientific contributions of Professor Robert G. Parr on the occasion of his 80th birthday.
