## 1.1: CHEMISTRY IS A PHYSICAL SCIENCE

- **Vocabulary**
  - **chemistry** – the scientific study of the composition, structure, and properties of matter and the changes that matter undergoes
  - **chemical** – any substance with a defined composition
- **Chapter Highlights**
  - Chemistry is the study of the composition, structure, and properties of matter and the changes that matter undergoes.
  - A chemical is any substance that has a definite composition or is used or produced in a chemical process.
  - Basic research is carried out for the sake of increasing knowledge. Applied research is carried out to solve practical problems. Technological development involves the use of existing knowledge to make life easier or more convenient.

## 1.2: MATTER AND ITS PROPERTIES

- **Vocabulary**
  - **matter** – anything that has mass and takes up space
  - **mass** -- a measure of the amount of matter in an object
  - **element** – a substance that cannot be separated or broken down into simpler substances by chemical means; all atoms of an element have the same atomic number
  - **atom** – the smallest unit of an element that maintains the chemical properties of that element
  - **compound** -- a substance made up of atoms of two or more different elements joined by chemical bonds
  - **extensive property** -- a property that depends on the extent or size of a system
  - **intensive property** -- a property that does not depend on the amount of matter present, such as pressure, temperature, or density
  - **physical property** -- a characteristic of a substance that does not involve a chemical change, such as density, color, or hardness
  - **physical change** -- a change of matter from one form to another without a change in chemical properties
  - **change of state** -- the change of a substance from one physical state to another
  - **solid** -- the state of matter in which the volume and shape of a substance are fixed
  - **liquid** -- the state of matter that has a definite volume but not a definite shape
  - **gas** -- a form of matter that does not have a definite volume or shape
  - **plasma** -- in physical science, a state of matter that starts as a gas and then becomes ionized; it consists of freemoving ions and electrons and it takes on an electric charge
  - **chemical property** -- a property of matter that describes a substance's ability to participate in chemical reactions
  - **chemical change** -- a change that occurs when one or more substances change into entirely new substances with different properties
  - **chemical reaction** -- the process by which one or more substances change to produce one or more different substances
  - **reactant** -- a substance or molecule that participates in a chemical reaction
