Molecular Biology Karp Manual:

Plant Cell Biology William V Dashek, 2010-03-09 While there are a few plant cell biology books that are currently available these are expensive methods oriented monographs The present volume is a textbook for upper undergraduate and beginning graduate students This textbook stresses concepts and is inquiry oriented To this end there is extensive use of original research literature As we live in an era of literature explosion one must be selective These judgements will naturally vary with each investigator Input was sought from colleagues in deciding the literature to include In addition to provision of select research literature this volume presents citations and summaries of certain laboratory methods In this connection the textbook stresses quantitative data to enhance the student s analytical abilities Thus the volume contains computer spread sheets and references to statistical packages e g Harvard Graphics and Statistica **Laboratory Exercises and**

Techniques in Cellular Biology Anthony Contento, 2012-10-26 The Contento Experimental Cell Biology Lab Book is a modular design that matches the topics discussed in Karp s textbook The manual itself consists of 30 experiments that coincide and complement each of the 18 chapters in the Karp text There are three possible designs of the lab book based on the instructor s needs These designs focus on either Techniques Concepts or Organelles The procedures of the 30 experiments remain standard and unchanged in all designs of the lab book Special Overview pages Discussion Questions and Datasheets bookend the procedures in order to create each of the possible textbook designs This gives instructors flexibility to create a lab book that suits their lecture course curriculum their experience and available equipment and supplies

Artificial Intelligence and Molecular Biology Lawrence Hunter, 1993 These original contributions provide a current sampling of AI approaches to problems of biological significance they are the first to treat the computational needs of the biology community hand in hand with appropriate advances in artificial intelligence The enormous amount of data generated by the Human Genome Project and other large scale biological research has created a rich and challenging domain for research in artificial intelligence These original contributions provide a current sampling of AI approaches to problems of biological significance they are the first to treat the computational needs of the biology community hand in hand with appropriate advances in artificial intelligence Focusing on novel technologies and approaches rather than on proven applications they cover genetic sequence analysis protein structure representation and prediction automated data analysis aids and simulation of biological systems A brief introductory primer on molecular biology and AI gives computer scientists sufficient background to understand much of the biology discussed in the book Lawrence Hunter is Director of the Machine Learning Project at the National Library of Medicine National Institutes of Health *Plant Genotyping II* Robert J. Henry, 2008 Describes some of the developments in the field of Plant Genotyping focusing on single nucleotide polymorphism SNPs This book covers the discovery analysis and uses of SNPs and examines other approaches to plant genotyping
