Semantic Models in IoT and eHealth Applications Sanju Tiwari, Fernando Ortiz Rodriguez, M.A. Jabbar, 2022-09-17 Semantic Models in IoT and eHealth Applications explores the key role of semantic web modeling in eHealth technologies including remote monitoring mobile health cloud data and biomedical ontologies The book explores different challenges and issues through the lens of various case studies of healthcare systems currently adopting these technologies Chapters introduce the concepts of semantic interoperability within a healthcare model setting and explore how semantic representation is key to classifying analyzing and understanding the massive amounts of biomedical data being generated by connected medical devices Continuous health monitoring is a strong solution which can

provide eHealth services to a community through the use of IoT based devices that collect sensor data for efficient health diagnosis monitoring and treatment All of this collected data needs to be represented in the form of ontologies which are considered the cornerstone of the Semantic Web for knowledge sharing information integration and information extraction Presents comprehensive coverage of advances in the application of semantic web in the field of eHealth Explores different challenges and issues through various case studies of healthcare systems that are adopting semantic web technologies Covers applications across a range of eHealth technologies including remote monitoring and mobile health

Become Data Driven with IBM Z Infused Data Fabric Makenzie Manna,Roger Bales,Colton Cox,Lakshmana-Narasimhan Ekambaram,Ravi Kumar,Karen Medhat,Ruben Thumbiran,IBM Redbooks,2022-08-02 The expansion of digital transformation initiatives resulted in the exponential rise of data generation It is now apparent that for organizations to meet their rapidly changing business needs they must use their most current data to fuel their insights However how to do so efficiently and effectively is still a challenge for most organizations that are trying to solve today s complex business problems Contributing to this challenge is that organizations are turning to a hybrid cloud approach of their IT infrastructure scaling to include on premises and cloud environments in response to the data growth This approach results in the requirement to integrate various data formats from disparate data sources into a central and unified view for use in analytics and AI with security and privacy as a top priority As a solution organizations are adopting the emerging architectural approach This approach enables efficient data integration across environments simplifies the delivery of disparate data throughout an organization and enables self service data consumption and governance Organizations with investments in the IBM Z platform have a unique opportunity to integrate them into their data fabric strategy A data fabric strategy makes mission critical data that is on Z readily available for real time decision making by using data where it originates which achieves faster time to insight This IBM Redbooks publication introduces the emerging concept of a data fabric and how integration of valuable data that is stored on IBM Z enables deeper insights and improved AI capabilities The intended audience for this publication includes data science professionals such as Data Stewards who want to develop and implement practices for building out a data governance framework that is facilitated by data fabric for AI workloads on IBM Z The audience also can include anyone who wants to use the rich capabilities of the IBM Z environment by using a data fabric that is infused with their business critical data and applications that are on the platform
