11th Edition covers two semesters of a general chemistry laboratory program The material focuses on the lab experiences
that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate
experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and
interpreting the data and minimizing inherent variables As a result of good data a scientific and analytical conclusion is made
which may or may not be right but is certainly consistent with the data Experiments write textbooks textbooks don't write
experiments A student's scientific literacy grows when experiences and observations associated with the scientific method
are encountered Further experimentation provides additional cause effect observations leading to an even better
understanding of the experiment The 11th edition's experiments are informative and challenging while offering a solid
foundation for technique safety and experimental procedure The reporting and analysis of the data and the pre and post lab
questions focus on the intuitiveness of the experiment The experiments may accompany any general chemistry textbook and
are compiled at the beginning of each curricular unit An Additional Notes column is included in each experiment's Report
Sheet to provide a space for recording observations and data during the experiment Continued emphasis on handling data is
supported by the Data Analysis section **Laboratory Manual for Principles of General Chemistry** Jo Allan
