Hamblin, 2012-12-06 Immunotherapy began in 1774 when the Dorset farmer Benjamin Jesty inoculated his wife and two sons with the pus from the teat of a cow suffering from cow pox using his wife's knitting needle as a vaccinating implement It has made slow progress Meanwhile the science of Immunology has burgeoned so much that if all immunologists read every page of the Journal of Immunology let alone the other Immunology journals then they would have no time left to write for it I am pleased that some of them have found the time to write for this volume In spite of the rapid expansion in immunological knowledge and the undreamt of complexity of the immune system that has been unravelled immunologists have remained until recently erudite but therapeutically effete Indeed anyone purporting to treat disease by immunological methods has been in danger of being labelled a quack or a crackpot Happily things are changing The nine chapters of this volume detail nine quite different approaches to manipulating the immune system for therapeutic benefit All are experimental and they have been attended with greater or lesser degrees of success In some cases their main effect has been to elucidate the complexity of the problem On the other hand there are people alive and well today as a result of these approaches who would otherwise have perished Immunotherapy is here to stay and it can only get better Immunotherapy in Translational Cancer Research Laurence J. Immunotherapy of Disease T J Hamblin, 1990-02-28 The Biomarkers, Mechanism, and Therapeutic Strategies of Cancer Immunotherapy Resistance Mou Peng, Xin Jin, Yunliang Gao, Xiaoxin Ren, 2025-07-30 Over the decades cancer immunotherapy has been a burgeoning science in medicine and an established pillar of therapeutic options for diverse cancer types Leading the way to success is mainly the discovery and development of immune checkpoint inhibitors ICIs and chimeric antigen receptor CAR T cell based therapies Under immunotherapy a portion of cancer patients enables to achieve a significant and durable remission with a longer survival time particularly in those with lung cancer melanoma genitourinary cancer etc However striking disparities still exist in the effectiveness of anticancer immunotherapy and cause a great challenge to select appropriate candidates A large part of cancer patients presents limited or no response to immunotherapy mainly attributable to immunotherapy resistance Despite of great strides already made the exact mechanism underlying immunotherapy resistance is still enigmatic Immunotherapy resistance is extremely complex and involves voluminous aspects such as tumor intrinsic factors aberrant expression of tumor antigens alterations of signaling pathways etc tumor extrinsic factors local tumor microenvironment etc and host related factors gender age etc More efforts should be made to

characterize the underlying mechanism and uncover robust targets for a better response rate **Cell-based Cancer Immunotherapy**, 2024-03-27 Cell based Cancer Immunotherapy Volume 183 provides the latest progress concerning research on anticancer cellular immunotherapies and their immunological translation or clinical aspects Topics covered in this volume include Methods behind clinical DC vaccine products against glioblastoma Fully closed and automated isolation of natural blood dendritic cells for cancer immunotherapy Methods behind Oncolytic virus based DC vaccines in cancer towards a multiphase combined treatment strategy for Glioblastoma GBM patients Identification of TCR repertoire patterns linked with anti cancer immunotherapy Training of epitope TCR prediction models with healthy donor derived cancer specific T cells Methods behind neoantigen predictions for anticancer vaccines Methods behind CD137L DC EBV VAX anticancer
