Further at times measurement of vibration in the gearbox is not easy because of the inaccessibility in mounting the vibration transducers This analysis system can be used for measuring the characteristics for a perfectly working gearbox and use the data as a standard for measuring faults and defects in other gearboxes The objective of this paper is to design and fabricate a gearbox motor current analysis system at different gear operations for a constant load Steady load conditions on the gearbox are tested for current signatures during different gear operations The motor current analysis system can be used further to specify mainly faults in the gear misalignment of meshed gears and loss of contact of the gears European Gear Box and Gear Motor Markets Frost & Sullivan Market Intelligence,1995-10-01
