microenvironment TIME Utilization of advanced omics techniques to study the contributing factors of immune evasion in cancer including high throughput sequencing like single cell RNA Seq spatial transcriptomics and AI driven models
Therapeutic implications of cancer immunotherapy clinical studies Please note that manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases except AI driven models which are not accompanied by validation independent cohort or biological validation in vitro or in vivo are out of scope for this section and will not be accepted as part of this Research Topic

Formation of Immunological Niches in Tumor Microenvironments: Mechanisms and Therapeutic Potential Ying Luo, Weiling Li, Qingyu Luo, Xiaosheng Tan, Yabing Nan, 2025-10-13 The tumor microenvironment TME plays a pivotal role in cancer progression and response to therapy Within this complex milieu immunological niches are specialized microenvironments that support the survival differentiation and function of immune cells profoundly influencing tumor immunity These niches are formed through intricate interactions between tumor cells immune cells and stromal cells mediated by various cytokines chemokines and adhesion molecules The stability and functionality of these niches can be altered by suppressive factors such as TGF and IL 10 contributing to tumor immune evasion Tumor associated stromal cells also play a critical role in shaping these niches further complicating the immune landscape of the TME Key components of immunological niches include tertiary lymphoid structures TLS immune checkpoint niches cytokine and chemokine niches stromal and fibroblastic niches metabolic niches epigenetic niches and microbiome associated niches Understanding the formation and regulation of these niches is crucial for developing new therapeutic strategies Understanding the formation and regulation of immunological niches is crucial for developing new therapeutic strategies Targeting these niches can potentially enhance the efficacy of immunotherapies and improve clinical outcomes This Research Topic aims to explore the clinical value molecular and cellular mechanisms underlying the formation of immunological niches their impact on tumor immune evasion and the development of novel therapeutic approaches to modulate these niches

Exercise Immunology James Turner, Guillaume Spielmann, John Campbell, 2024-10-24 Exercise immunology is a discipline at the nexus of exercise physiology and immunology that aims to characterise the effects of exercise on the immune system in health and disease This new edition of Exercise Immunology begins by providing an evidence based introduction to the effects that individual bouts of exercise and exercise training have on the characteristics and functioning of the immune system In addition to introducing the immune system and summarising how different forms of exercise affect the characteristics and functioning of the immune system this new and fully revised edition will explore exercise immunology in the context of immune ageing cancer autoimmune diseases and cardiometabolic disease In addition the authors discuss other factors that impact immune health such as nutrition and environmental stressors and explain the physiological basis of how exercise changes immune function across the healthspan and lifespan This book is written by leading exercise immunologists and is structured to provide a suggested curriculum of an exercise immunology degree

component Every chapter includes summaries of current and up to date research and offers practical guidelines to translate laboratory based information into clinical settings This textbook is essential for any exercise immunology degree component or advanced exercise physiology degree and will be vital reading for students in exercise and biological sciences and clinicians and researchers interested in the therapeutic applications of exercise **Update on Translational**
