Journal Inorganic Chemistry:

Journal of inorganic and general chemistry, 1904 Publishes original research papers from all areas of inorganic chemistry molecular chemistry solid state chemistry and complex chemistry **Russian Journal of Inorganic Chemistry**, 1969 **Open Inorganic Chemistry Journal**, **Comprehensive Inorganic Chemistry II**, 2013-07-23 Comprehensive Inorganic Chemistry II Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists Covering more interdisciplinary and high impact areas Comprehensive Inorganic Chemistry II includes biological inorganic chemistry solid state chemistry materials chemistry and nanoscience The work is designed to follow on with a different viewpoint and format from our 1973 work Comprehensive Inorganic Chemistry edited by Bailar Emelius Nyholm and Trotman Dickenson which has received over 2 000 citations The new work will also complement other recent Elsevier works in this area Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry to form a trio of works covering the whole of modern inorganic chemistry Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements their compounds or applications Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in Chief The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field The chapters will not provide basic data on the elements which is available from many sources and the original work but instead concentrate on applications of the elements and their compounds Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields such as biological inorganic chemistry materials chemistry solid state chemistry and nanoscience Inorganic chemistry is rapidly developing which brings about the need for a reference resource such as this that summarise recent developments and simultaneously provide background information Forms the new definitive source for researchers interested in elements and their applications completely replacing the highly cited first edition which published in 1973 **Collected Readings in Inorganic Chemistry** Gordon Galloway, 1972 Journal of Inorganic Chemistry, 1961 Advances in Inorganic Chemistry Rudi van Eldik, Jan Reedijk, 2006-01-18 Advances in Inorganic Chemistry Volume 58 focuses on homogeneous biomimetic oxidation catalysis Contributions by leading experts in the field cover important advances in inorganic and bioinorganic chemistry Contributions include diversity based approaches to selective biomimetic oxidation catalysis the selective conversion of hydrocarbons with H₂O₂ using biomimetic non heme iron and manganese oxidation catalysis DNA oxidation by copper and manganese complexes influences of the ligand in copper dioxygen complex formation and substrate oxidations biomimetic oxidations by dinuclear and trinuclear copper complexes In the final contribution the authors focus on green oxidation of alcohols using biomimetic copper complexes and enzymes as catalysts Volume 58 provides another welcomed addition to the widely acclaimed series
