

High-Energy Multi-Spark For Performance Cars

This completely revised capacitor discharge ignition system is designed to provide a very high energy multi-spark discharge each time the spark plug is fired. It enables complete mixture combustion in virtually all internal combustion engines used in cars and motorcycles and is especially effective with engines that run at high RPM.

WHILE FACTORY-DESIGNED ignition systems in modern vehicles operate reliably and give a high-energy spark, there are many situations where a multi-spark capacitor discharge ignition (CDI) can provide a better result than the standard ignition. Perhaps the best examples are in old 4-stroke engines with conventional points ignition and in all 2-stroke engines.

The faster rise time, hotter sparks and multiple-spark discharges can eas-

ily fire plugs that are fouled up with carbon caused by oil in the fuel. Again, with an older engine, a multi-spark CDI system can be especially beneficial when the engine is cold and running with a rich fuel mixture.

A CDI also draws less power from the vehicle's 12V battery compared to conventional ignition systems. This can be a real advantage where a vehicle has a low output alternator or generator or in some racing vehicles where no alternator is fitted (eg. in drag racing).

One drawback of CDI systems is the potential of cross-fire between spark plugs due to the rapid rise time of the spark voltage. Cross-fire sounds like "pinging" and can cause severe engine damage if it happens consistently. Therefore, we do not recommend using our High-Energy Multi-Spark CDI system on 6-cylinder and V8 engines unless you can improve the lead dress of the spark plug leads so that each lead is more widely separated from its neighbour.

Twentyfour years have gone by since the publication of K Lohner and H MOiler s comprehensive work Gemischbildung und Verbrennung im Ottomotor in 1967 1 1 Naturally the field of mixture formation and combustion in the spark ignition engine has witnessed great technological advances and many new findings in the intervening years so that the time seemed ripe for presenting a summary of recent research and developments Therefore I gladly took up the suggestion of the editors of this series of books Professor Dr H List and Professor Dr A Pischinger to write a book summarizing the present state of the art A center of activity of the Institute of Internal Combustion Engines and Automotive Engineering at the Vienna Technical University which I am heading is the field of mixture formation therefore many new results that have been achieved in this area in collaboration with the respective industry have been included in this volume The basic principles of combustion are discussed only to that extent which seemed necessary for an understanding of the effects of mixture formation The focal point of this volume is the mixture formation in spark ignition engines covering both the theory and actual design of the mixture formation units and appropriate intake manifolds Also the related measurement technology is explained in this work
