Jan 2015 Chemistry Mark Scheme:

India-US Relations in the Age of Uncertainty B.M. Jain, 2016-04-20 In the initial phase of the Obama administration India's ruling class and strategic community formed a perception that the spirit of strategic partnership between the two countries might be diluted on account of China looming large in the priorities of this administration. Despite occasional hiccups in their relationship this perception was overshadowed by the administration's recognition of India's role as counterweight to China in the Asia Pacific region. This book addresses and re-evaluates the perceptions, policies and perspectives of public policy makers and bureaucratic elites in both India and the US in setting and articulating the tone, tenor and substance of the multi-faceted ties between the two countries. The scope of the book is not exclusively limited to the bilateral relationship in the critical areas such as the Indo-US nuclear deal, defence security and strategic partnership. Its concerns and ramifications are much wider in global and regional contexts covering security architecture in the Asia Pacific region, the interface between terrorism and weapons of mass destruction (WMDs), China as a factor in India-US relations and the fallout of the New Delhi-Washington partnership on South Asia.

Life-Cycle Greenhouse Gas Emissions of Commercial Buildings Cuong N. N. Tran, Vivian W. Y. Tam, Khoa N. Le, 2021-07-12 This book develops a model to evaluate and assess life cycle greenhouse gas emissions based on typical Australian commercial building design options. It also draws comparisons between some of the many green building rating tools that have been developed worldwide to support sustainable development. These include Leadership in Energy and Environmental Design (LEED) by the United States Green Building Council (USGBC), Building Research Establishment Environmental Assessment Method (BREEAM) by the Building Research Establishment, Comprehensive Assessment System for Building Environmental Efficiency (CASBEE) by the Japanese Sustainable Building Consortium, and Green Star Environmental Rating System by the Green Building Council of Australia. Life cycle assessment (LCA), life cycle energy consumption and life cycle greenhouse gas emissions form the three pillars of life cycle studies which have been used to evaluate environmental

impacts of building construction Assessment of the life cycle greenhouse gas emissions of buildings is one of the significant obstacles in evaluating green building performance This book explains the methodology for achieving points for the categories associated with reduction of greenhouse gas emissions in the Australian Green Star rating system The model for the assessment uses GaBi 8 7 platform along with Visual Basic in Microsoft Excel and shows the relationship between the building s energy consumption and greenhouse gas emissions released during the lifetime of the building The data gathered in the book also illustrates that the green building design and specifications are becoming more popular and are being increasingly utilized in Australia This book is important reading for anyone interested in sustainable construction green design and buildings and LCA tools
