Jardins Potagers Terres Inconnues:

The Urban Garden City Sandrine Glatron, Laurence Granchamp, 2018-03-24 This book provides an interdisciplinary overview of the role of gardens in cities throughout different historical periods. It shows that thanks to various forms of spatial and social organisation, gardens are part of the material urban landscape, biodiversity, symbolic and social shape, and assets of our cities and are increasingly becoming valued as an order to follow. Gardens have long been part of the development of cities serving different purposes through the ages, shaping neighborhoods to promote health or hygiene, introducing aesthetic or biological elements, gathering the citizens around a social purpose, and providing food and diversity in times of crisis. Highlighting examples that can serve as the basis for comparisons, the chapters offer a brief panorama of experiences and models of gardens in the city in the European context and in various periods of history, while also discussing issues related to garden cities, urban agriculture, and community gardens. The contributors are university staff from various disciplines in the human and life sciences in discourse with other academics but also with practitioners who are interested in experiences with urban gardens and in promoting an awareness of their spatial, social, and philosophical goals throughout history. The book will appeal to urban geographers, sociologists, and historians but also to urban ecologists dealing with ecosystem services, biodiversity, and sustainable development in cities. From a more operational standpoint, landscape planners and architects are sure to find many of the projects enlightening and inspirational.

Soils as a Key Component of the Critical Zone 5 Christian Valentin, 2018-11-26 One third of the world's soils have already been degraded. The burden on the land continues to grow under the combined pressures of demography, urbanization, artificialization, and mining, and there are increased demands on agricultural land, changing dietary preferences, land speculation, as well as new demands for agroenergy, fiber, green chemistry, and more. Resulting issues such as soil crusting, water and wind erosion, soil salinization, and soil acidity therefore constitute a major threat. The authors of this book present the main processes and factors of soil degradation, different ways to prevent it, and methods of rehabilitation. The book also deals with the origin and processes of metallic and organic soil pollution, as well as methods of phytoremediation and restoration. It is one of the few books to explore the issue of soil artificialization and urban soil management and to highlight how agricultural and urban waste can be used to amend and fertilize cultivated soils.

Cities and Agriculture Henk de Zeeuw, Pay Drechsel, 2015-09-16 As people increasingly migrate to urban settings and more than half of the world's population now lives in cities, it is vital to plan and provide for sustainable and resilient food systems which reflect this challenge. This volume presents experience and evidence-based state-of-the-art chapters on the key dimensions of urban food challenges and types of intra- and peri-urban agriculture. The book provides urban planners, local policy makers, and urban development practitioners with an overview of crucial aspects of urban food systems based on an up-to-date review of research results and practical experiences in both developed and developing countries. By doing so, the international team of authors provides a balanced textbook for students of the

growing number of courses on sustainable agriculture food and urban studies as well as a solid basis for well informed policy making planning and implementation regarding the development of sustainable resilient and just urban food systems
