

Welcome to PhotoModeler

This document describes the *PhotoModeler*, *PhotoModeler Scanner* and *PhotoModeler UAS* products. PhotoModeler is a Windows program that helps you extract measurements and 3D models from photographs. By using a camera as an input device, PhotoModeler lets you capture accurate detail in a short time.

PhotoModeler Scanner has all the capabilities of PhotoModeler plus the ability to scan surfaces to extract dense point clouds. See [Dense Surface Modeling / PhotoModeler Scanner](#) for information on this product. It also has the ability to model an object over time. See [Time-based Measurement / Motion Projects](#) more information.

PhotoModeler UAS (PhotoModeler for Unmanned Aircraft Systems) has all the capabilities of PhotoModeler Scanner plus the ability to measure volumes, use multi-spectral imagery, use imported geographic coordinates (points and camera positions) for processing and coordinate system setup, and generate project reports in .pdf format. This product is intended mainly for aerial photography based measurement projects (e.g. mines/stockpiles, agricultural monitoring, terrain surveys). See [Unmanned Aerial Projects](#).

"PhotoModeler" will be used in this document interchangeably to refer to both the PhotoModeler, PhotoModeler Scanner, and PhotoModeler UAS products.

To use PhotoModeler, one or more photographs of a scene or an object are taken. The photographs are displayed on screen and the operator marks each photograph with the mouse, tracing and tagging features of interest. PhotoModeler then combines the data and locates the marked features in three dimensions. The marks become accurately measured points, lines, curves, cylinders or surfaces in a single, unified 3D space. The result is a 3D model that can be transferred to any graphics or CAD program.

For an overview of the PhotoModeler process, refer to the section [Overview of Producing a 3D Model](#).

The Tutorial Movies are the best way to learn PhotoModeler. There are a few concepts in PhotoModeler that are unique and it is best to read the Quick Start Guide and watch the tutorials before embarking on your first project.

Pappa,2000 This paper discusses photogrammetric measurements of a 5m diameter inflatable space antenna using four Kodak DC290 2 1 megapixel digital cameras The study had two objectives 1 Determine the photogrammetric measurement precision obtained using multiple consumer grade digital cameras and 2 Gain experience with new commercial photogrammetry software packages specifically PhotoModeler Pro from Eos Systems Inc The paper covers the eight steps required using this hardware software combination The baseline data set contained four images of the structure taken from various viewing directions Each image came from a separate camera This approach simulated the situation of using multiple time synchronized cameras which will be required in future tests of vibrating or deploying ultra lightweight space structures With four images the average measurement precision for more than 500 points on the antenna surface was less than 0 020 inches inplane and approximately 0 050 inches out of plane

Quincey,2016-07-15 Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi temporal data to detect elevation position and volumetric changes that are symptomatic of earth surface processes This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy It then critically reviews current usage of Structure from Motion in the geosciences provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines This book will appeal to academics students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition image processing and data quality assessment and includes case studies that have been contributed by experts from around the world
