

DEBEG 9517

Power Alarm Panel

The IMO requires in COMSAR Circular 16 „Guidelines on the Configuration of the Reserve Source or Sources of Energy used to supply Radio Installations on GMDSS Ships“ a visual and audible failure indication for all power supply units which automatically switch over to battery operation when ship's mains or power supply units fail.

The contents of the alarm messages presented on the integrated LC display for power supplies correspond to the labelling of the automatic circuit-breakers on the switchboard DEBEG 9002. As a result, the electrical loads concerned can be unambiguously disconnected from the battery to prevent unnoticed discharging of the radio battery.

Features

The DEBEG 9517 supervises and indicates visually and acoustically the failure of

- battery chargers,
- forced ventilation of battery rooms,
- power supply units with automatic switch-over relay contact to battery operation and
- temperature stabilisation systems used in battery boxes outside of the compass bridge.

The alarm panel thus serves a single purpose, namely checking the functions of power supply units and additional devices.
