Level I & II Aggregate Reference Manual 2010-2011, 2010 **Evaluation of Methodology for Determining Truck Vehicle Miles Traveled in Illinois** R. F. Benekohal, 2002 Nationwide surveys of departments of transportation metropolitan planning organizations and classification vendors producers were conducted to determine the state of practice on equipment and methodologies used to determine truck vehicle miles traveled VMT The current Illinois Department of Transportation IDOT methodology was evaluated and it was found that it overestimated truck VMT for multi unit trucks on all eight functional classes except on the minor urban arterials The average overestimation was 11.5% and it varied from 10% to 44% The current method overestimated truck VMT for single unit trucks in five and underestimated in three functional classes The under over estimation ranged from 6% to 35% but the average value was close to zero To calculate truck VMT more accurately this study proposed two different methods based on average truck percentage ATP and average section length

ASL In the ATP method truck VMT is calculated by multiplying the ATP for a group of roadway sections by the total VMT of that group The ATP method should be used when the ATP and the total VMT by volume groups are available In the ASL method the total truck volume for the sampled sections is multiplied by the ASL The ASL method should be used when the information required for ATP is not available or not reliable Sample size influences the accuracy of truck VMT estimation and the decision on sample size must consider the error level that is acceptable This study looked at the likely error for different sample sizes and recommended using 8% to 16% of the number of roadway sections The sections should be distributed among the volume groups Recently IDOT collects vehicle classification data for three categories at about 10 000 sections biennially It is recommended to evaluate the truck VMT calculation using recent data Design Guidance for Intersection Auxiliary Lanes Kay Fitzpatrick,2014 TRB s National Cooperative Highway Research Program NCHRP Report 780 Design Guidance For Intersection Auxiliary Lanes expands on guidance provided in A Policy on Geometric Design of Highways and Streets the Green Book published by the American Association of State Highway and Transportation Officials AASHTO This report highlights information regarding bypass lanes channelized right turn lanes deceleration and taper length design and capacity of multiple left turn lanes and alternative intersection designs Publisher description *Monthly Catalog of United States Government Publications* ,1976 *For the Long Haul* Don Morrow,2002 **State Rail Policies, Plans, and Programs** Leigh B.
