Future City Architecture for Optimal Living Stamatina Th. Rassia, Panos M. Pardalos, 2015-04-01 This book offers a wealth of interdisciplinary approaches to urbanization strategies in architecture centered on growing concerns about the future of cities and their impacts on essential elements of architectural optimization livability energy consumption and sustainability It portrays the urban condition in architectural terms as well as the living condition in human terms both of which can be optimized by mathematical modeling as well as mathematical calculation and assessment Special features include new research on the construction of future cities and smart cities discussions of sustainability and new technologies designed to advance ideas to future city developments Graduate students and researchers in architecture engineering mathematical modeling and building physics will be engaged by the contributions written by eminent international experts from a variety of disciplines including architecture engineering modeling optimization and related fields **Technology**

Management for Sustainable Production and Logistics Paulina Golińska, Arkadiusz Kawa, 2015-01-21 Innovative technologies provide opportunities for making manufacturing and logistics operations cleaner and more resource efficient New technologies focus on lifecycle engineering and lifecycle management This book will be valuable to both academics and practitioners who wish to deepen their knowledge of technology management The book will cover technical organizational financial and social issues connected to the implementation of more sustainable technologies **Demystifying**

Sustainability Haydn Washington, 2015-02-11 What is sustainability Much has been said about the terms sustainability and sustainable development over the last few decades but they have become buried under academic jargon This book is one of the first that aims to demystify sustainability so that the layperson can understand the key issues questions and values involved Accessible and engaging the book examines the old sustainability of the past and looks to the future considering how economic ecological and social sustainability should be defined if we are to solve the entwined environmental economic and social crises It considers if meaningful sustainability is the same as a sustainable development based on endless growth examining the difficult but central issues of overpopulation and overconsumption that drive unsustainability The book also explores the central role played by society's worldview and ethics along with humanity's most dangerous characteristic denial Finally it looks to the future discussing the appropriate technology needed for sustainability and suggesting nine key solutions This book provides a much needed comprehensive discussion of what sustainability means for students policy makers and all those interested in a sustainable future Quantitative Biology: Dynamics of Living Systems Noriko Hiroi, Viji

M. Draviam, Tetsuya J. Kobayashi, Akira Funahashi, Chun-Biu Li, Douglas B. Murray, Hiroaki Takagi, Ziya Kalay, Rinshi S. Kasai, Jason Edward Shoemaker, Akatsuki Kimura, Naoki A. Irie, 2017-07-24 With the emergence of Systems Biology there is a greater realization that the whole behavior of a living system may not be simply described as the sum of its elements To represent a living system using mathematical principles practical quantities with units are required Quantities are not only

the bridge between mathematical description and biological observations they often stand as essential elements similar to genome information in genetics This important realization has greatly rejuvenated research in the area of Quantitative Biology Because of the increased need for precise quantification a new era of technological development has opened For example spatio temporal high resolution imaging enables us to track single molecule behavior in vivo Clever artificial control of experimental conditions and molecular structures has expanded the variety of quantities that can be directly measured In addition improved computational power and novel algorithms for analyzing theoretical models have made it possible to investigate complex biological phenomena This research topic is organized on two aspects of technological advances which are the backbone of Quantitative Biology i visualization of biomolecules their dynamics and function and ii generic technologies of model optimization and numeric integration We have also included articles highlighting the need for new quantitative approaches to solve some of the long standing cell biology questions In the first section on visualizing biomolecules four cutting edge techniques are presented Ichimura et al provide a review of quantum dots including their basic characteristics and their applications for example single particle tracking Horisawa discusses a quick and stable labeling technique using click chemistry with distinct advantages compared to fluorescent protein tags The relatively small physical size stability of covalent bond and simple metabolic labeling procedures in living cells provides this type of technology a potential to allow long term imaging with least interference to protein function Obien et al review strategies to control microelectrodes for detecting neuronal activity and discuss techniques for higher resolution and quality of recordings using monolithic integration with on chip circuitry Finally the original research article by Amariei et al describes the oscillatory behavior of metabolites in bacteria They describe a new method to visualize the periodic dynamics of metabolites in large scale cultures populations These four articles contribute to the development of quantitative methods visualizing diverse targets proteins electrical signals and metabolites In the second section of the topic we have included articles on the development of computational tools to fully harness the potential of quantitative measurements through either calculation based on specific model or validation of the model itself Kimura et al introduce optimization procedures to search for parameters in a quantitative model that can reproduce experimental data They present four examples transcriptional regulation bacterial chemotaxis morphogenesis of tissues and organs and cell cycle regulation The original research article by Sumiyoshi et al presents a general methodology to accelerate stochastic simulation efforts They introduce a method to achieve 130 times faster computation of stochastic models by applying GPGPU The strength of such accelerated numerical calculation are sometimes underestimated in biology faster simulation enables multiple runs and in turn improved accuracy of numerical calculation which may change the final conclusion of modeling study This also highlights the need to carefully assess simulation results and estimations using computational tools

Pedagogies of Kindness and Respect Paul Lee Thomas,2015 Pedagogies of Kindness and Respect presents a wide variety of concepts from scholars and practitioners who discuss pedagogies of kindness an alternative to the no excuses ideology now dominating the way that children are raised and educated in the U S today The fields of education and especially early childhood education include some histories and perspectives that treat those who are younger with kindness and respect This book demonstrates an informed awareness of this history and the ways that old and new ideas can counter current conditions that are harmful to both those who are younger and those who are older while avoiding the reconstitution of the romantic innocent child who needs to be saved by more advanced adults Two interpretations of the upbringing of children are investigated and challenged one suggesting that the poor do not know how to raise their children and thus need help while the other looks at those who are privileged and therefore know how to nurture their young These opposing views have been discussed and problematized for more than thirty years Pedagogies of Kindness and Respect investigates the issue of why this circumstance has continued and even worsened today
