Microbiology 2nd Edition is a fully revised comprehensive introductory text aimed at students taking a first course in the subject. It provides an ideal entry into the world of microorganisms considering all aspects of their biology: structure, metabolism, genetics, and illustrates the remarkable diversity of microbial life by devoting a chapter to each of the main taxonomic groupings. The second part of the book introduces the reader to aspects of applied microbiology, exploring the involvement of microorganisms in areas as diverse as food and drink production, genetic engineering, global recycling systems, and infectious disease. Essential Microbiology explains the key points of each topic but avoids overburdening the student with unnecessary detail. Now in full colour, it makes extensive use of clear line diagrams to clarify sometimes difficult concepts or mechanisms. A companion web site includes further material, including MCQs, enabling the student to assess their understanding of the main concepts that have been covered. This edition has been fully revised and updated to reflect the developments that have occurred in recent years and includes a completely new section devoted to medical microbiology. Students of any life science degree course will find this a concise and valuable introduction to microbiology.

Enhancing Sustainable Crop Production: Biostimulants and Biotechnological Approaches in Challenging Climates Günter Neumann, Fahim Nawaz, Markus Weinmann, Vicent Arbona, Raffaella Balestrini, Chiara Pagliarani, Miguel Gonzalez-Guzman, 2025-01-07

In the face of climate change, agricultural and horticultural systems are encountering challenges related to resource availability, agrochemical restrictions, and production costs. The use of biostimulants as plant strengtheners and green biotechnological strategies offers potential solutions. However, there are limitations to their field application, making it crucial to bridge the gap between lab research and practical implementation. Meanwhile, the need for safe and environmentally friendly practices to ensure sustainable food production in challenging climates is growing. This Research Topic aims to explore the field application of biostimulants and novel biotechnological approaches for enhancing crop productivity and stress tolerance. We invite authors to submit research papers on the application of biostimulants in cropping systems under field conditions, including arable and permanent crops.
