Hess,Bethany Little,2015 More than a decade ago Michael Lewis penned the influential book *Moneyball* An examination of how Oakland Athletics General Manager Billy Beane used data to make his franchise competitive with wealthier baseball teams the book struck a chord Beane s strategy of making decisions based on data had a powerful and positive impact on the performance of the Oakland A s and people quickly saw that this practice could and should be more widely applied This paper suggests ways to revamp federal education policies and programs to help lawmakers spend public funds more effectively and efficiently to improve student outcomes The aim is to identify a set of proposals that have some bipartisan appeal and can make a practical difference This effort was informed by thinking from a select group of seasoned experts from the left and right who have much experience with federal education policy Given strong principled disagreements about the nature of the federal role in education three caveats are vital First this exercise assumes that the

recommendations will be revenue neutral Second this exercise does not assume that the federal government should dictate to states or localities exactly how to spend their funds Third moneyball strategies are not imagined to suggest that we should only value what can currently be measured or paint everything as either working or not working Even with these caveats however promoting more use of data evidence and evaluation to do better for students is too important to pass up Moneyball could also present a bipartisan pathway forward at a time when much of education policy seems to be increasingly stuck in fruitless debate
