Atomic Transport and Defects in Metals by Neutron Scattering Christian Janot, Winfried Petry, Dieter Richter, Tasso Springer, 2012-12-06 The Institut Max von Laue Paul Langevin ILL in Grenoble regularly organises workshops that deal with the various applications of neutrons in physics chemistry biology and also in nuclear physics The workshop Atomic Transport and Defects in Metals by Neutron Scattering jointly organised by the Institut Laue Langevin and the Institut für Festkörperforschung of the KFA Jülich was held in October 1985 in Jülich The study of problems in metal physics and in physical metallurgy is a traditional field of neutron scattering The most commonly used methods are diffuse elastic

small angle and inelastic scattering of neutrons A number of problems can be identified where neutrons yield information that is supplementary to that from other methods such as x ray diffraction synchrotron radiation or electron microscopy In certain fields for example spectroscopy for the investigation of atomic motions or for the investigation of magnetic properties neutron scattering is a unique method The facilities at the High Flux Reactor of the ILL and also at the Jilich and at other medium flux research reactors have contributed numerous results in these fields It was the aim of this workshop to give a survey of the present state of neutron scattering in metal physics
