Ecotoxicology and Genotoxicology Marcelo L Larramendy, 2017-07-05

The potential impact of anthropogenic pollutants such as agrochemicals on the environment is of global concern Increasing use of certain compounds can result in contamination of food water and atmospheric systems and in order to combat this pollution it is important to be able to accurately monitor the short and long term effects This book describes the latest aquatic species models used as indicators of the toxic effects of environmental pollutants including models that have not routinely been used The book enables understanding of the effects of pollutants in non target species and therefore enables analysis of the effects on ecosystems This book will be of interest to anyone interested in developing new biomarker species with high degrees of ecological relevance It will serve as a useful resource for regulatory and research toxicologists particularly those studying freshwater marine water and sediment environments

Nanotoxicology Alok Dhawan, Diana Anderson, Rishi Shanker, 2017-11-03

The rapid expansion of the nanotechnology field raises concerns like any new technology about the toxicity and environmental impact of nanomaterials This book addresses the gaps relating to health and safety issues of this field and aims to bring together fragmented knowledge on nanosafety Not only do chapters address conventional toxicity issues but also more recent developments such as food borne nanoparticles life cycle analysis of nanoparticles and nano ethics In addition the authors discuss the environmental impact of nanotechnologies as well as safety guidelines and ethical issues surrounding the use of nanoparticles In particular this book presents a unique compilation of experimental and computational perspectives and illustrates the use of computational models as a support for experimental work Nanotoxicology Experimental and Computational Perspectives is aimed towards postgraduates academics and practicing industry professionals This highly comprehensive review also serves as an excellent foundation for undergraduate students and researchers new to nanotechnology and nanotoxicology It is of particular value to toxicologists working in nanotechnology chemical risk assessment food science environmental safety chemical engineering the biological sciences and pharmaceutical research

**Male-mediated Developmental Toxicity** Diana Anderson, Khaled Habas, 2024-07-01

cells have a unique and critical role as the conduit for hereditary information. The issue of male germline mutagenesis and the effects on developmental defects in the next generation has become increasingly high profile in recent years. Understanding the mechanisms by which the germline is induced and maintained is one of the effective ways to treat infertility and cancer. Male mediated Developmental Toxicity discusses these issues and provides analysis of the fundamental mechanisms of mutations covering both clinical and experimental aspects. It helps clarify the data explaining how genotoxicity involves multiple modes of action and highlights novel models and assays being used to assess germ cell genotoxicity. With a clear focus on the various mechanisms that could impact human health, this book is for postgraduate students and researchers in reproductive and developmental toxicology as well as those with an interest in the fields of genetically inherited diseases, developmental biology and potentially those with a more clinical background.

Micronucleus Assay in Toxicology Siegfried Knasmueller, Michael Fenech, 2019-07-18. Concerns about the adverse health effects of chemicals and radiation present in the environment and at workplaces have created the need for better detection systems to assess their potential to cause DNA damage in humans and other organisms across ecosystems. The Micronucleus Assay in Toxicology is the first comprehensive volume concerning the use of micronucleus assays in genetic toxicology. It succinctly explains the mechanisms by which genotoxins cause micronucleus formation and its relation to diseases. Furthermore, it describes the methods which are currently used for the analyses of micronuclei in different types of cells in human in vivo, biomonitoring studies, routine in vivo tests with rodents, in vitro studies with human and mammalian cells, environmental monitoring with invertebrates and vertebrates such as molluscs, fish and also in plant bioassays. Moreover, this book also focuses on the use of the micronucleus technique in other research areas including the detection of DNA damage caused by important groups of genotoxic carcinogens, heavy metals, industrial chemicals, cytotoxic drugs, pesticides, ionising radiation etc. as well as study designs, statistical analyses, international regulatory guidelines and the development of automated scoring devices for this assay. This book will serve as both a reference and a guide to students and investigators in biomedical, biochemical and pharmaceutical sciences interested in gaining a better understanding of the biology of micronuclei and their application in measuring DNA damage caused by natural or man-made genotoxins.

Big Data in Predictive Toxicology Daniel Neagu, Andrea-Nicole Richarz, 2019-12-04. The rate at which toxicological data is generated is continually becoming more rapid and the volume of data generated is growing dramatically. This is due in part to advances in software solutions and cheminformatics approaches which increase the availability of open data from chemical, biological and toxicological and high throughput screening resources. However, the amplified pace and capacity of data generation achieved by these novel techniques presents challenges for organising and analysing data output. Big Data in Predictive Toxicology discusses these challenges as well as the opportunities of new techniques encountered in data science. It addresses the nature of toxicological big data, their storage, analysis and interpretation. It also details how these data can be applied in toxicity prediction.

modelling and risk assessment This title is of particular relevance to researchers and postgraduates working and studying in the fields of computational methods applied and physical chemistry cheminformatics biological sciences predictive toxicology and safety and hazard assessment

**Formaldehyde** Luoping Zhang,2018-05-18 Formaldehyde is virtually ubiquitous in the modern environment due to its cost effective nature its use in resin formation and its preservative properties Though formaldehyde is necessary for many products and processes important to the world s economy this economic dependence on formaldehyde comes at a cost to public health Growth and consequent industrialization rely heavily on formaldehyde use New buildings residences public places and offices are not only built with timber preserved by formaldehyde but they are also furnished with wood wool and textile products that contain formaldehyde The general population faces environmental exposure from indoor and outdoor air pollution food and even medicine Scientific inquiry into formaldehyde exposure has grown in response This book consolidates the new and established body of formaldehyde research in the scholarly community focusing on exposure genotoxicity and adverse health outcomes Through this resource we hope to increase awareness of the broad range of health effects posed by formaldehyde exposure and to encourage interdisciplinary interest as well as research into this pervasive compound especially in the United States and China where formaldehyde production and usage is high This book will be useful to researchers of environmental and occupational exposure students and government regulators and anyone exposed to formaldehyde in the workplace and or at home

*Chemical Health Threats* Raquel Duarte-Davidson,Tom Gaulton,Stacey Wyke,Samuel Collins,2018-10-23 Chemical health threats can have impacts across national borders and so may be more effectively tackled by international cooperation than by individual governments acting alone As such in November 2013 the European Union published the EU Decision for Serious Cross Border Threats to Health establishing a number of mechanisms for a coordinated Europe wide response with regards to preparedness risk assessment risk management risk communication and international cooperation Comprising a series of chapters from leading international researchers this book covers recent developments in the field which support the implementation of these European legal instruments It begins by contextualising the need for data that surveillance of toxic threats can deliver before going on to examine some of the tools that have been developed to facilitate toxicosurveillance in Europe as well as current

toxicosurveillance networks outside the EU In addition this book covers the European Union regulation concerning the Registration Evaluation Authorisation and Restriction of Chemicals REACH and the work of the Alerting System for Chemical Health Threats ASHT project to improve the risk assessment and management of chemical health threats in Europe The volume provides a vital resource for researchers educators policy makers and practitioners with an interest in key questions facing global hazardous substance control
