

## Lesson 5 Part 1: Introduction

# Citing Evidence to Support Inferences

### CCLS

RL.7.1: Cite several pieces of textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.

Theme: *The Element of Surprise*

Have you ever looked at something that interested you, such as a hot air balloon or a telescope, and tried to figure out how it works? An **analysis** is an examination of how the different parts of something work together. When you read a story, you analyze how its parts—its characters, settings, and events—work together to create meaning.

Some story details are **explicit**, or clearly stated. “Jesse was excited about going to the museum” is an example of an explicit detail: You know that Jesse is excited and why. But story information can also be less direct. You might have to make an **inference**, or an educated guess based on details in the story and your own knowledge, to figure out what’s going on.

After his dad had gone upstairs, Pete clenched his fists and stomped out of the room to go get a bucket and fill it with soapy water. His dad had just told him they were having company that evening and that Pete had to help out by doing some extra chores. Pete had finished all of his homework in study hall that day and had planned on spending the afternoon reading his new comic book, not mopping floors and dusting shelves.

Using details from the text and your own knowledge, fill in the blanks in the chart below.

Evidence	+	Background Knowledge	=	Inference
<ul style="list-style-type: none"> <li>Pete “clenched his fists and _____.”</li> </ul>		When people clench		Pete is angry about
<ul style="list-style-type: none"> <li>Pete had “planned on spending the afternoon _____.”</li> </ul>		their fists and stomp out		_____
<ul style="list-style-type: none"> <li>not _____.”</li> </ul>		of a room, these are signs		_____
		that they		_____
		_____.		

When you’re analyzing a story to make an inference, pay close attention to details in the text. Read closely to find evidence that you can cite, or give as proof, that the inference is reasonable. By making and supporting inferences, you’ll be like an engineer looking at a machine you’ve never seen before, piecing together clues to figure out how it works.
