

Lesson #: 5.3	Unit: Chemistry	Topic: Covalent Bonding
Objectives: SWBAT explain the difference between covalent bonds and ionic bonds. Students will be able to describe how covalent bonds form multiple bonds.		Materials: Element bonding cards
KPCS Standard: S1-4b. Explain how compounds are formed, and how their properties are different than the atoms they are composed of.		
Assessment: Students will identify how to form compounds based on the number of bonds available for each pair.		Vocabulary: covalent bond, single bond, double bond, triple bond
Do-Now: What types of elements typically form ionic bonds? What compounds would be formed by the following elements: Ca and F, Na and O, Al and O.		Agenda: 1. Do Now (5 min) 2. Covalent Bonds (10 min) 3. Multiple Bonds (20 min) 4. Independent Practice (20 min) 5. Share (10 min) 6. Reflect (5 min)
Motivation: Sometimes elements form covalent bonds where they share more than 2 electrons. This can determine their friendships-there can be friends (single bonds), best friends (double bonds), or BFFs (triple bonds).		
New Material: • Covalent bonds are formed when elements share electrons. Usually, elements will share 2 electrons in order to fulfill their outermost shells, but they can also share 4 with a double bond, or 6 with a triple bond.		
Guided Practice: 1. Review how covalent bonds are formed. Remind that covalent bonds occur when electrons are shared, and ionic bonds are where electrons are given and taken. 2. When covalent bonds are formed, they can share 2, 4 or 6 electrons in order to fill their outermost shells. By looking at the elements that are bonding, you can determine how many bonds are being shared.		
Independent Practice: 3. Students will practice drawing Lewis structures of both covalent and ionic bonds. They will practice ensuring that each has 8 valence electrons.		
Closing: 4. All elements want to have 8 valence electrons in their outermost shells. They can accomplish this by forming ionic or covalent bonds.		
Assessment Questions: 5. What elements typically form ionic bonds? Covalent bonds? 6. Covalent bonds can form up to how many bonds? 7. Choose two of the following elements and show what compound they would form. Identify whether it's ionic or covalent.		
Homework: 8. Forming covalent bonds.		
Differentiation: 9. Students with special needs can work with another student to show the bonds that are formed.

Lessons in Environmental Microbiology Roger Tim Haug, 2019-07-17 Lessons in

Environmental Microbiology provides an understanding of the microbial processes used in the environmental engineering and science fields. It examines both basic theory as well as the latest advancements in practical applications including nutrient removal and recovery, methanogenesis, suspended growth bioreactors, and more. The information is presented in a very user-friendly manner; it is not assumed that readers are already experts in the field. It also offers a brief history of how microbiology relates to sanitary practice and examines the lessons learned from the great epidemics of the past. Numerous worked example problems are presented in every chapter.

A Unit on Photosynthesis and Cellular Respiration for Secondary Biology Students Kathy R. Pollock, 1998

Basic Electronic Devices and Circuits Donald J. Grantham, 1977

In this book Tom Brokaw goes out into America to tell through the stories of individual men and women the story of a generation: America's citizen heroes and heroines who came of age during the Great Depression and the Second World War and went on to build modern America. This generation was united not only by a common purpose but also by common values: duty, honor, economy, courage, service, love of family and country, and above all, responsibility for oneself. In this book you will meet people whose everyday lives reveal how a generation persevered through war and were trained by it and then went on to create interesting and useful lives and the America we have today.
