The psychology behind sports performance Sam N. Thrower, Vaithehy Shanmuganathan-Felton, Chris G. Harwood, 2023-08-11 Have you ever watched sport on TV and wondered how athletes like LeBron James Serena Williams Lionel Messi Simone Biles and Virat Kohli are able to perform so well in front of thousands of people Just the thought of it is enough to make most people throw up and pass out For over 100 years sport psychologists scientists interested in how the brain influences sport performance have been studying athletes and teams in order to

understand more about the psychology behind successful sport performance These scientific studies have uncovered some fascinating insights regarding what it takes to become an elite athlete and perform at the highest level In this collection we will reveal some of the secrets that sport psychologists have uncovered in relation to sport performance Specifically we will highlight what has been learnt from research which has explored elite athletes background their personalities what motivates them how they are able to maintain their concentration where they get their confidence from and how they are able to cope under pressure The collection will help children and young athletes understand how the way they think and feel in different situations influences their performances and how those in their surrounding environment e g coaches parents friends and teammates can influence their performances and long term development These insights are not only exciting they start to highlight how young athletes can play a crucial role in enhancing their own performances both within and outside of sport e g school music performing arts and dance

Innovative Trends in Teacher Education for the 21st Century Dr. S. Bella Wiselet and L. Vinila, 2019-04-14 Education seeks to provide the intellectual enlightenment and the spiritual emancipation in the search for a better existence for all life on earth Teacher education must target skills for the 21st Century and beyond them to address the needs of a knowledge society These days teacher s education system is facing problem of inaptness and irrelevance There is a visible gap between how students live and how they learn Schools and colleges have struggled to keep the pace with the rate of change in students lives inside and outside the educational institution Innovative educational practices support the development of new capabilities and surfacing stumbling blocks on the road to innovation implementation The implementation of learning that promotes the development of general capabilities and deep learning approaches in students is at the centre of the paradigmatic changes

Reconstruction in Education for Impacting a Sustainable Tomorrow Dr.C.Subbulakshmi, Dr.P.B.Beulahbel Bency , Good quality education is an essential tool for achieving a more sustainable world This was emphasised at the UN World Summit in Johannesburg in 2002 where the reorientation of current education systems was outlined as key to sustainable development Education for sustainable development ESD promotes the development of the knowledge skills understanding values and actions required to create a sustainable world which ensures environmental protection and conservation promotes social equity and encourages economic sustainability The concept of ESD developed largely from environmental education which has sought to develop the knowledge skills values attitudes and behaviours in people to care for their environment The aim of ESD is to enable people to make decisions and carry out actions to improve our quality of life without compromising the planet It also aims to integrate the values inherent in sustainable development into all aspects and levels of learning Education and the future are inseparably intertwined It is impossible to think about educational matters without making references to the future Our understanding of future determines for example what knowledge and which skills are important for the next generation Regarding sustainability issues it makes a difference whether sustainability is thought as a concrete aim which can be

reached through technical innovation and efficiency or whether it is more a normative direction which needs to be determined democratically. Futures in education determine decisions in the present and thus can be understood as futures for the present. If the future is the same as the present or can be predicted with any certainty then it would seem to be not so difficult to decide what the next generation should best be equipped with. However, if the future is presumed to be uncertain, which is ultimately the case, then the necessary knowledge and skills are not that easy to determine. On closer observation of society and educational practice, the described idealized picture of education seems difficult to maintain. Especially institutionalized education is far from being free of external influences. The promise of a better future has been shattered because of a few severe global crises. Future in post modern societies has come to be understood instead as uncertain and contingent.
