Two Decades of Research on Learning Disabilities in India

S. Ramaa*

Regional Institute of Education (NICERT), Manasa Gangotri, Mysore-570006, India

This paper describes a range of research studies relating to learning disabilities in India during the last two decades. Attention is called to the existence of many different languages within India. Standardized and teacher-made tools have been developed for assessment and remediation purposes. The paper ends by making some suggestions for further research.

INTRODUCTION

The concept of learning disabilities is still new in many developing countries. However, India has a history of research in this area, primarily over the last two decades. Investigators from different disciplines have been involved, such as education, psychology, paediatrics, speech and hearing, and psychiatry.

Conducting studies of learning disabilities in India is not an easy task because of its multilingual and multicultural background. At present, there are 25 states and seven Union Territories (UT). Each state/UT has its own language and each language has many dialectical forms. There are 18 standard languages, each one of which has its own orthographic system (for details of Indian writing systems see Prakash and Malatesha Joshi, 1995). In fact, the states were formed on the basis of the main regional language spoken by the majority of the people within certain geographical boundaries. Each state/UT has its own regional language (the language spoken by the majority of its people) and its official language. For example, in South India there are four main states—Karnataka, Tamil Nadu, Andhra Pradesh and Kerala. The official languages of these states are Kannada, Tamil, Telugu and Malayalam, respectively. Sometimes the spoken language and the official language are one and the same and sometimes they may be different. In India the majority of the people speak Hindi, which means that Hindi is the national language. English, too, since it is an international language, is also

Disability LD has been defined by the National Joint Committee on Learning Disabilities NJCLD as a heterogeneous group of disorders of presumed neurological origin manifested differently and to varying degrees during the life span of an individual. Various manifestations of LD may be seen at different ages and as a result of varying learning demands NJCLD 1985 2001a 1990 2001c. Gingoog City Comprehensive National High School in the Division of Gingoog City is the only secondary school accepting Special Education SPED students. The increasing number of enrollees at risk with LD each year among other exceptionalities is so alarming that a Self Contained classrooms for students at risk with Learning Disabilities are opened to address these students needs. GCCNHS Principal s Report 2011. This action research was conducted to find out if there would be improvement in reading abilities of learners at risks with learning disability to help their reading capacity.

Research Issues in Learning Disabilities Sharon Vaughn, Candace S. Bos, 2012-12-06. In this chapter we described issues in conducting intervention research with students with learning disabilities on the secondary level. We maintained that interventions should be well grounded in theories of learning as well as characterizations of learning disabilities. Pressley Scruggs that they should first be conducted in a series of highly controlled laboratory like experiments to carefully assess the potential utility of the intervention and that if the intervention is successful in highly controlled settings it should then be evaluated in classroom applications. We maintained that research designs should evolve as the research questions become more applied and that the results of laboratory research should be used to support the findings of classroom applications. Finally we described several research designs that we have found useful in conducting classroom intervention research. There is a great deal more to conducting intervention research of course than experimental or quasi experimental design. Intervention strategies likely to be effective must be identified relevant literature must be reviewed experimental materials must be developed and cooperative schools teachers parents and students must be located. Nevertheless inadequate research designs can invalidate the best and most successful efforts in all of these areas while effective and practical research designs can do much to document the best practices and advance our knowledge of effective interventions with students with learning disabilities.

Hallahan, Barbara K. Keogh, 2001-03-01 This volume honors the founder of the International Academy for Research in Learning Disabilities IARLD William M Cruickshank and his many accomplishments His influence on special education in general and learning disabilities in specific is evident throughout the world Consistent with his international activities the contributors to this book represent nine different countries The chapters reflect a range of perspectives on the state of the art in learning disabilities documenting both commonalities and differences across countries Taken together the chapters provide a comprehensive and informative picture of learning disabilities *Theory and Research in Learning Disabilities* J.P. Das, 2013-11-11 Although a number of books have appeared on learning disabilities we feel that the present book has two distinct features which are not found in most others It is multidisciplinary and it combines theory with practice A group of researchers from the disciplines of Psychology including medical psychology and information processing Reading Special Education and Physical Education interacted with each other before and after their presentations in a conference November 1980 at the University of Alberta Edmonton Canada and then wrote their chapters for this book We hope that their chapters were enriched by the discussions and arguments which happened in formal and informal settings during the authors stay in Edmonton Dr Leong could not attend the conference but was asked to write the introductory chapter for the book The contributors to this volume have been involved with basic research as well as with clinical and educational research in learning disabilities Some of them have a theoretical rather than a practical interest However a serious interest in a handicapping condition perhaps compels one to consider its amelioration no matter how pure is the researcher It is because of such a feeling that those who do basic research have suggested procedures for applying their findings The result is a balanced product entailing theory and practice **Research in Learning Disabilities** Sharon Vaughn, Candace S. Bos, 1987 Contemporary Intervention Research in Learning Disabilities Bernice Y.L. Wong, 2012-12-06 Recently in the area of learning disabilities a subarea of special education an interesting development has become discernible This development centers on the increasing focus of learning disabilities professionals on theory building and empirical research and it is reflected in the spate of books currently being published With their clear emphasis on conceptual and methodological issues along with directions for future research these newly published books differ essentially from the bulk of learning disabilities textbooks They include S Vaughn and C Bos Eds *Research in Learning Disabilities Issues and Future Directions* published in 1987 by College Hill T E Scruggs and B Y L Wong Eds *Intervention Research in Learning Disabilities* published in 1990 by Springer Verlag and L Swanson Ed *Learning Disabilities Theoretical and Research Issues* published in 1991 by Lawrence Erlbaum Associates As reflected in these three books the discipline began with a service orientation and has evolved beyond that to come of age with aspirations

of becoming a scientific discipline These books can be taken to voice the concerted efforts of learning disabilities professionals to promote theory building and empirical research Undeniably these books provide valuable information on conceptual issues and research in learning disabilities Nevertheless they appear to have one drawback namely they focus exclusively on learning disabilities research in North America

Learning disabilities screening and evaluation guide for low- and middle-income countries Anne M. Hayes,Eileen Dombrowski,Allison H. Shefcyk,Jennae Bulat,2018-04-29 Learning disabilities are among the most common disabilities experienced in childhood and adulthood Although identifying learning disabilities in a school setting is a complex process it is particularly challenging in low and middle income countries that lack the appropriate resources tools and supports This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process It also describes a phased approach that countries can use to assess their current screening and evaluation services as well as determine the steps needed to develop strengthen and build systems that support students with learning disabilities This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development Although this guide primarily addresses learning disabilities the practices processes and systems described may be also used to improve the identification of other disabilities commonly encountered in schools
