Life Orientation Exam 2014:

Capturing Social and Behavioral Domains and Measures in Electronic Health Records Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Recommended Social and Behavioral Domains and Measures for Electronic Health Records, 2015-01-08 Determinants of health like physical activity levels and living conditions have traditionally been the concern of public health and have not been linked closely to clinical practice. However, if standardized social and behavioral data can be incorporated into patient electronic health records (EHRs), those data can provide crucial information about factors that influence health and the effectiveness of treatment. Such information is useful for diagnosis, treatment choices, policy, health care system design, and innovations to improve health outcomes and reduce health care costs. **Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2** identifies domains and measures that capture the social determinants of health to inform the development of recommendations for the meaningful use of EHRs. This report is the second part of a two-part study. The Phase 1 report identified 17 domains for inclusion in EHRs. This report pinpoints 12 measures related to 11 of the initial domains and considers the implications of incorporating them into all EHRs. This book includes three chapters from the Phase 1 report in addition to the new Phase 2 material. Standardized use of EHRs that include social and behavioral domains could provide better patient care, improve population health, and enable more informative research. The recommendations of **Capturing Social and Behavioral Domains and Measures in Electronic Health Records Phase 2** will provide valuable information on which to base problem identification, clinical diagnoses, patient treatment outcomes assessment, and population health measurement.

Research on Emotion and Learning: Contributions from Latin America Camilo Hurtado-Parrado, Carlos Gantiva, Leonardo A. Ortega, Alexander Gómez-A, Lucas Cuenya, Javier Leonardo Rico, 2020-05-11 Latin America has increased its share of world scientific publications by nearly twofold during the last two decades, approximately from 2 to 4%. Despite this positive trend, the scholarly impact of scientific research produced in the region, measured in terms of citation rate, remains low. Two interrelated factors that contribute to this situation are that most research groups tend to work in isolation or in local sporadic collaboration and results are often published in journals that are not indexed in major citation databases, e.g., SCOPUS or Web of Science. Ultimately, part of Latin American high-quality research seems to remain hidden from the rest of the world. Over the last decades, an important number of Latin American scientists have developed fruitful research agendas on questions on learning and emotion, focusing on basic and/or translational research with humans and other animal models and implementing diverse methodologies. Notwithstanding the important contributions of these research programs, Latin American research on emotion and learning has followed the overall trend of other research fields throughout the region, namely, remaining partially hidden from the large scientific community of the world. This Research Topic aimed to engage researchers from Latin America to share their empirical and conceptual work on

learning and emotion Ultimately this effort was expected to strengthen and integrate our regional community of experts enhance global networking and establish new challenges and developments for future investigation

Genetics of Psychological Well-Being Michael Pluess, 2015-06-18 In the past decade there has been an explosion of research into the psychology of well being While we know that psychological well being is partly heritable it is only recently that researchers have started to investigate the specific genetic factors that influence well being Such research explores not only heritability based on traditional twin study designs but also includes studies combining some of the most recent molecular genetic techniques and methods This landmark book summarizes the state of knowledge regarding heritability and molecular genetics in positive psychology Divided into four parts it starts by exploring the basics of genetics and associated research methodology providing the reader with the knowledge required to understand the empirical work presented throughout the volume The second part of the book focuses on heritability estimates of the most important positive psychology concepts based on quantitative behavioural genetics studies In the third section of the book results from more recent molecular genetics studies are presented including candidate gene gene environment interaction as well as genome wide association studies This section also contains chapters on epigenetics and imaging genetics both relatively new methodologies that are just about to make their way into the field of positive psychology The fourth and final part of the book discusses more overarching questions regarding the roles of genes and environment in the development of well being as well as a review and discussion of the current state of knowledge and future direction in this new field of inquiry The first book of its kind The Genetics of Psychological well being is a major contribution to the positive psychology literature and important for all those in the fields of positive psychology psychiatric genetics and well being
