## Process of Evolution

After finishing reading this chapter, you should be able to:

Demonstrate contributions to our understanding of how life on Earth has changed over time.

Trace genetic mutations and variations in traits are important for natural selection to occur.

Explain how the theory of evolution explains the great variety and commonality of all lifeforms on Earth.

Consider the role of life... while the planet has been cycling on its axis, the first signs of plants show as simple a beginning million of beautiful and wonderful forms that, and are being created.

and the first life forms of plants.

### Plants

Have you ever noticed a building wall or a tree trunk covered with ivy? If you're curious, at the top you will notice groups of leaves growing about every 40 centimeters along the stem. You may already have past experiences that a plant's roots normally grow in the soil. There they anchor the plant in the soil and take in water and food for the plant. Ivy plants have roots that grow in the ground, also produce stems along their stems. These stems are called aerial stems. They may wonder what function these aerial stems have. The aerial stems of ivy plants, in fact, the ivy is a wall or tree trunk. In fact, it has roots that enable the ivy to climb up from the ground. (See page 4.)

Questions may come to mind at this point. How did ivy come to be this special type of ivy? How did ivy plants develop an ability to have the ability to climb high on a tree trunk?
