

Natural Sciences Grade 8 Term 3 Summaries

Unit 1 What is static electricity?

- **static electricity:**
 - electric charge that an object has as a result of friction; not flowing electricity
- Electrons move from one atom to another atom.
- An atom that loses electrons has more positive charges (protons) than negative charges (electrons).
- This is known as positively charged.
- An atom that gains electrons has more negative particles than positive particles. This is known as negatively charged.
- When charges are separated in this way, they are known as static electricity or electrostatics. Charge is never created or destroyed.
- Negative charges are transmitted from one object to another.
- This is known as the Principle of the Conservation of Charge.
- If two materials have different charges, they attract each other.
- If two materials have the same charge, they provide resistance to each other or push each other away.

- Similar charges repel each other; unequal charges attract each other
- **friction:** when two objects are rubbed.

Unit 2 Electric charge Electric

power fields

- •Thrust or traction in static electricity can be described by the concept of a force field.
- An electric force field surrounds every particle that has an electric charge force field.
- The electric charge creates a force field in the empty space around it.
- An electron in this force field is positively attracted by positive (+) charges or it can be pushed away from negative (-) charges.

Sparks in static electricity

- A release of electrons causes the sparks or shock or static electricity.
- This means that a stream of electrons is released from an object.
- Sparks can usually be seen when passing negative charges to conductors.
- A spark will also occur if an air vent occurs between the object releasing the electrons and the object to which it is transferred.
- The electrons jump over the air vent.
- They heat the air to high temperatures causing the air to glow or expand.
- You observe it as a spark or hear a crackle.

Electric charge:

- a storage of electricity electrical power: the amount of attraction or repulsion force between two objects

Education for Knowing Paul A. Wagner, Frank K. Fair, 2020-10-30 If our goal is Education for Knowing as the title says then we need to be guided by a conception of what knowing is For example we can all agree that there are math facts that students need to learn and we can agree that there are general concepts and laws that students should be acquainted with But is there more involved perhaps something like nurturing in students a desire to probe deeper into the workings of thing Or developing a capacity to explain why things work the way they do Our conceptions of what genuine knowing is serve as guides to what we think the goal of education is and they tell us how to build a student However as it turns out there are multiple conceptions of what knowing truly involves and these conceptions tend to be different for different sets of education stakeholders such as parents and their children school administrators and educational researchers Understanding this diversity of conceptions of knowing will make it easier for representatives of the different stakeholder groups to work together to accomplish the goal of building knowing students
