Scientific and Technical Aerospace Reports, 1979 **Celestial Mechanics** Bhola Ishwar, 2006 A review of current state of the art aspects in the area of Space Dynamics and Celestial Mechanics this book is comprised of five sections concluding with a chapter on the Moon Mission Forthcoming Books Rose Army, 2002-02 *Satellite Orbits* Oliver Montenbruck, Eberhard Gill, 2012-12-06 *Satellite Orbits Models Methods and Applications* has been written as a comprehensive textbook that guides the reader through the theory and practice of satellite orbit prediction and determination Starting from the basic principles of orbital mechanics it covers elaborate force models as well as precise methods of satellite tracking and their mathematical treatment A multitude of numerical algorithms used in present day satellite trajectory computation is described in detail with proper focus on numerical integration and parameter estimation The wide range of levels provided renders the book suitable for an advanced undergraduate or graduate course on spaceflight mechanics up to a professional reference in navigation geodesy and space science Furthermore we hope that it is considered useful by the increasing number of satellite engineers and operators trying to obtain a deeper understanding of flight dynamics The idea for this book emerged when we realized that documentation on the methods models and tools of orbit determination was either spread over numerous technical and scientific publications or hidden in software descriptions that are not in general accessible to a wider community Having worked for many years in the field of spaceflight dynamics and satellite operations we tried to keep in close touch with questions and problems that arise during daily work and to stress the practical aspects of orbit determination Nevertheless our interest in the underlying physics motivated us to present topics from first principles and make the book much more than just a cookbook on spacecraft trajectory computation
